Courses from undergraduate study programme (BSc) – General information

CREATING VISUAL MEDIA			Code: 284467
Course teacher	VANDA JURKOVIĆ	Course status	compulsory
Original course title	Kreiranje vizualnih medija	Semester (winter/summer)	winter
Teacher's contact email	vanda.jurkovic@grf.unizg.hr	ECTS credits	2
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+0+2
COURSE DESCRIPTION			
Course objectives	The aim of the course is to perform artistic design for various graphic products. Targeted elements of the visual structure are used, with given frames as well as freer approaches. Students will design visual solutions, edit and author work based on the arrangement of optical weights, images, titles, subtitles, vignettes and other artistic interventions on the pages of given media and based on the level of color wavelengths and backgrounds (for newspapers, books of various content, magazines). Students will apply different styles, create a visual project. The goal is to create a portfolio of works.		
Learning outcomes	<ol style="list-style-type: none"> 1. Perceptually display shapes with relevant graphic systems. 2. Design conceptual approaches to visual representations based on expressive or idea. 3. To use art in the author's practice of graphic realization from the compositional system to the individual sign. 4. Show the form of different syntactic-semantic readability. 5. To create original creative work. 6. Apply theoretical knowledge to your own practical work. 		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Edit elements of the newspaper page. 2. Edit elements of the book page (scientific, fiction, sports). 3. Edit elements for the magazine, weekly, magazine page. 4. Create an author's idea perceptually (through measurement) on a given background through abstract forms. 5. To create an author's idea perceptually (by measuring) on a given background using figurative forms. 6. Create an author's idea perceptually (through measurement) on a given background with given elements by combining wavelengths (colors). 7. Create an author's idea of a conceptual type on a given topic. 8. Create an author's idea of an expressive character. 9. Edit the given page using linear picture structures with illustration. 10. Edit page using the presentation structures flat with the given elements. 11. Edit page by means of visual structures tonally with the given elements. 12. Edit page using light-shadow image structures with default elements. 13. Edit page using image structures, colours and combination of images. 		

	14. Realize a composition on a given topic through stylization. 15. Stylizing and making a sign.

DIGITAL MULTIMEDIA			Code: 284457
Course teacher	KLAUDIO PAP, MAJA RUDLOF	Course status	compulsory
Original course title	Digitalni multimedij	Semester (winter/summer)	winter
Teacher's contact email	klaudio.pap@grf.unizg.hr maja.rudolf@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The aim of this course is to provide students with fundamental knowledge and skills necessary for understanding and applying digital multimedia. Through the study of the basic components of digital text, image, sound, video, and animation, students will acquire key concepts such as the em square, vector and raster graphics, Bezier curves, as well as digital transformations and filtering. Additionally, students will gain an understanding of digital image processing, histogram analysis, and the integration of multimedia elements into web content through the use of basic HTML and CSS elements.		
Learning outcomes	<ol style="list-style-type: none">1. Classify the basic components of digital multimedia.2. Distinguish between vector, pixel, and raster image formats.3. Use different types of encoding for digital information in various digital media.4. Utilize graphic tools for basic editing and integration of digital multimedia content.5. Differentiate between various color digitization systems in a digital multimedia environment.6. Use software tools for basic digital transformations and filtering of digital images.		
Course content (syllabus)	<ol style="list-style-type: none">1. Introduction to Digital Multimedia: Overview of the basic components of digital multimedia and their significance in modern media.2. Em square, digital baseline and font as an ordered set of em squares.3. Digital image: Basics and Types: Definitions of vector, pixel, and raster images; differences between them and their applications.4. Bezier curves and vector graphics.5. Digital vector path.6. Digital image elements.7. Digital transformations and image filtering.8. Use of histograms in redistributing n-channel encoded grayscale in digital images.9. Digital rasterization and color digitization.10. Basic techniques for integrating text, images, sound, video, and animation into multimedia content.		

	11. Defining basic HTML elements and attributes for creating multimedia web content. 12. Basic set of CSS commands and their application in presenting multimedia content on the web.
Required literature (available in the library and/or via other media)	Title

SOUND AND LIGHT			Code: 284465
Course teacher	KATARINA ITRIC IVANDA	Course status	compulsory
Original course title	Zvuk i svjetlost	Semester (winter/summer)	winter
Teacher's contact email	katarina.itric.ivanda@grf.unizg.hr	ECTS credits	3
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+2+0
COURSE DESCRIPTION			
Course objectives	The aim of the course is to introduce students to the basic physical concepts of sound and light and their application in various areas of multimedia engineering. Through the course, students will acquire fundamental knowledge in the fields of sound perception, interference, resonance, modulation, and the potential applications of sound in multimedia, video games, and augmented reality. Additionally, students will gain an understanding of the fundamental principles of geometric and physical optics in multimedia engineering and the technological limitations that arise from them. In seminars, students will develop critical thinking, data analysis, and visualization skills through demonstrative experiments and group work.		
Learning outcomes	<ol style="list-style-type: none"> 1. Explain the basic principles of optics, electromagnetism, and sound through examples from multimedia engineering. 2. Interpret the characteristics and quantities used to describe sound waves. 3. Discuss the limitations of geometric and physical optics in multimedia engineering. 4. Classify light sources based on the mechanisms of radiation generation. 5. Explain the integration of light elements in various multimedia systems. 		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Sources of sound waves and basic characteristics of sound waves 2. Superposition of sound waves 3. Sound perception 4. Conversion of analog to digital signals 5. The role of sound in multimedia, video games, and augmented reality 6. Sources of electromagnetic radiation and their characterization 7. Interaction of light and matter 8. Optical components of various systems for recording and reproduction 9. Interference, diffraction, and polarization of light and their application in multimedia engineering 10. Application of optical phenomena in digital communication devices

INTERACTION OF GRAPHIC MATERIALS			Code: 289896
Course teacher	MARINA VUKOJE BEZJAK	Course status	compulsory
Original course title	Interakcija grafičkih materijala	Semester (winter/summer)	winter
Teacher's contact email	marina.vukoje@grf.unizg.hr	ECTS credits	3
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The aim of this course is to provide students with basic technical knowledge to understand the concepts and theories of adhesion and their application in graphic technology. Students will become familiar with the formation of adhesive bonds, drying methods, thermodynamic properties of surfaces and interfaces, and compatibility between different materials. The course will cover surface treatment of materials to achieve effective adhesion and ensure the quality of adhesive bonds. Students will explain methods for determining the strength and stability of adhesive bonds and explore the application of adhesion in printing, bookbinding, material protection, and packaging.		
Learning outcomes	<ol style="list-style-type: none">1. Explain basic concepts related to adhesion, adhesion theories, and the formation of adhesive bonds.2. Identify problems that may arise when forming adhesive bonds between different materials.3. Describe various surface treatment methods for materials.4. Comment on factors that may affect the stability of adhesive bonds.5. Differentiate adhesion principles through specific examples such as paper-printing ink bonds, paper-glue, aluminum-printing ink, polyethylene-printing ink, and pressure-sensitive adhesive bonds.		
Course content (syllabus)	<ol style="list-style-type: none">1. Introduction to adhesion, general concepts, and definitions. Adhesion theory and basic properties.2. Formation of adhesive bonds and drying methods.3. Surface and interface theories. Thermodynamic properties of surfaces.4. Surface compatibility and problems in forming adhesive bonds between different materials.5. Surface treatment of materials (polymers, wood, glass, metal) to create bonds.6. Methods for determining adhesive bonds. Determining the strength of adhesive bonds.7. Determining the stability of adhesive bonds.8. Adhesive bonds in graphic technology. Importance of adhesion and its application in printing, bookbinding, material protection, and packaging.9. Achieving adhesion in paper-printing ink, paper-glue, aluminum-printing ink, polyethylene-printing ink, pressure-sensitive adhesive bonds, and others.

BIOLOGICAL FACTORS IN GRAPHIC TECHNOLOGY			Code: 289900
Course teacher	MARINA VUKOJE BEZJAK	Course status	optional
Original course title	Biološki čimbenici u grafičkoj tehnologiji	Semester (winter/summer)	winter
Teacher's contact email	marina.vukoje@grf.unizg.hr	ECTS credits	3
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The aim of this course is to provide students with fundamental theoretical and practical knowledge of microbiology, with a focus on its application in graphic engineering as a tool for monitoring material analysis and degradation. Students will learn how to grow, inoculate, and classify microorganisms, apply microscopy and sterile techniques, and conduct simple microbiological tests. The course will also cover the role of microorganisms in the degradation of graphic materials and the control of contamination resulting from graphic processes. Additionally, it will explain the process of biodegradation and the impact of various environmental parameters on it, as well as its role in graphic engineering. Through laboratory exercises, students will develop the skills necessary to maintain microbiological cleanliness and quality of graphic products, particularly packaging.		
Learning outcomes	<ol style="list-style-type: none">1. Explain basic concepts in microbiology.2. Demonstrate sterile working techniques in the laboratory.3. Perform basic techniques for culturing microorganisms.4. Identify sources of microbiological contamination and material degradation.5. Apply simple microbiological tests in graphic engineering.6. Explain biodegradation processes and the impact of various parameters on biodegradation.		
Course content (syllabus)	<ol style="list-style-type: none">1. Basic theoretical knowledge in microbiology. Types of microorganisms.2. Basics of microbiological work (sterile technique, safety).3. Cultivation and inoculation of microorganisms. Media and conditions for microorganism growth.4. Microscopy techniques. Identification of microorganisms.5. Microbiological methods. Determination of bacterial count and contamination monitoring tests. Preparation of decimal dilutions.6. Microorganisms as causes of material degradation. Prevention methods.7. Microorganisms as a tool for controlling pollution caused by graphic processes.8. Biodegradation of materials, dyes, and waste streams (paper, polymers). Impact of environmental factors on biodegradation efficiency.9. Application of microbiological testing in graphic engineering.		

University of Zagreb
Faculty of Graphic Arts

	10. Importance of microbiology in packaging technologies. Microbiological contamination and cleanliness.
Required literature (available in the library and/or via other media)	Title
	Sharma, P. D. Microbiology : a textbook for university students / P. D. Sharma. Meerut : Rastogi Publications, 2017.
	Smart packaging technologies for fast moving consumer goods / [editors] Joseph Kerry, Paul Butler. Chichester : Wiley, 2008.

FIBROUS PRINTING SUBSTRATES			Code: 289897
Course teacher	MAJA STRIŽIĆ JAKOVLJEVIĆ BRANKA LOZO	Course status	compulsory
Original course title	Vlaknate tiskovne podloge	Semester (winter/summer)	winter
Teacher's contact email	maja.strizic.jakovljevic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The objectives of the proposed course include acquiring fundamental knowledge about the technological processes of production and the properties of fibrous printing substrates. Students will learn to independently conduct laboratory tests on various properties of these substrates and analyze the results. Additionally, the course will enable them to understand the technical characteristics of fibrous printing substrates in the graphic industry, recognize the impact of additives and coatings on their properties, and develop the ability to select appropriate substrates for specific graphic products, while fostering independence and responsibility in decision-making.		
Learning outcomes	<ol style="list-style-type: none">1. Explain the properties of fibrous printing substrates that are defined during the technological production process.2. Apply laboratory methods for testing the properties of fibrous printing substrates.3. Analyze the results of laboratory tests on graphic materials, linking practical work with theoretical knowledge.4. Comment on the technical characteristics of fibrous printing substrates (paper/cardboard) used in the graphic industry.5. Interpret the impact of various additives to fibres and coatings in the production of fibrous printing substrates on their properties.6. Select a fibrous printing substrate (paper/cardboard) for a specific graphic product, considering the product requirements.		
Course content (syllabus)	<ol style="list-style-type: none">1. Historical overview of the production of fibrous printing substrates.2. Fiber raw materials for the production of printing substrates.3. Types and processing of cellulose.4. Technological process of paper production on a paper machine, properties defined during this process.5. Fiber additives in the production of fibrous printing substrates.6. Cardboard and paperboard.7. Finishing in the production of fibrous printing substrates, coatings.8. Collection of used fibrous printing substrates, sorting, transport, and recycling.9. Dimensional stability and moisture of fiber materials.10. General and structural properties of fibrous printing substrates – determining thickness, grammage, surface mass, and specific volume.		

	<ol style="list-style-type: none">11. Surface properties of fibrous printing substrates – Bekk smoothness, Bendtsen roughness, Cobb surface absorbency.12. Mechanical properties of fibrous printing substrates – tensile, determining the number of double folds, tear resistance (Elmendorf), burst resistance (Mullen), Taber stiffness.13. Optical properties of paper – determining the degree of brightness, whiteness, opacity, and gloss.14. Chemical properties of fibrous printing substrates – determining the pH of the paper surface, determining the content of fillers in paper.15. Technical specifications of commercially available fibrous printing substrates.

Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The aim of the course is to introduce students to the extensive world of graphic preparation for digital media. Digital media will be defined and compared. Topics for which graphic preparation will be made through project tasks will be determined. Content for digital media will be planned and created. It will also be planned how to maintain a consistent style through different digital media. Prototypes will be made. Basic computer coding for web design and user interfaces will be performed. The process of creating an advertisement for digital media will be planned. Equipping video content with text, graphics and 3D elements.		
Learning outcomes	<ol style="list-style-type: none"> 1. Design content for digital media. 2. Use graphic programs for image processing and text layout. 3. Plan graphic preparation for different digital media. 4. Present the planned message and graphic solution. 		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Introduction to the extensive world of graphic preparation for digital media. 2. Definition and differentiation of digital media. 3. Determining the focus and defining the message that is intended to be placed. 4. Planning and creating content. Selection of fonts, colors and styles. 5. Maintaining a consistent style across different media. 6. Creation of prototypes. 7. Performing basic computer coding for web design and user interfaces. 8. Content Update. 9. Planning and creating advertising for digital media. 10. Equipping video content with text, graphics and 3D elements.

INDUSTRY AND ENVIRONMENT			Code: 98042
Course teacher	IVANA BOLANČA MIRKOVIĆ	Course status	compulsory
Original course title	Industrija i okoliš	Semester (winter/summer)	winter
Teacher's contact email	ivana.bolanca.mirkovic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The aim of the course is to familiarize students with the impact of graphic technology processes on the environment, and to transfer theoretical knowledge in the field of environmental engineering and its practical application. The further goal of the course is to introduce students to the ecological aspect of cellulose and paper production, paper recycling in relation to other methods of disposal of used graphic products. Students are trained to understand and make sound conclusions in the field of the ecological aspect of conventional printing techniques (offset printing, flexo printing, gravure printing, and screen printing) as well as digital printing techniques (electrophotography and inkjet printing). Students are introduced to the best available techniques in the field of graphic reproduction, as well as the development of printing substrates and inks, including nanotechnology and nanomaterials. The aim is to acquire theoretical knowledge that can be improved through practical work in the laboratory. In the laboratory, units originally related to environmental issues are processed. The goal is for students to achieve information recognition and understanding, as well as to develop generic skills, presentation skills, and teamwork.		
Learning outcomes	Students will be able to analyze the ecological aspect of energy sources and assess the environmental suitability of renewable energy sources. Students will be able to describe and evaluate the ecological aspect of cellulose, paper, recycled paper, and printing inks production. Students will be able to evaluate the environmental impact and health risks of conventional and digital printing techniques. Students will be able to describe the best available techniques in the field of printing substrates, inks, and printing.		
Course content (syllabus)	<ol style="list-style-type: none">1. <i>Lecture</i>: Major causes of environmental devastation. Principles of environmental protection. Legal regulations in the field of environmental protection. <i>Exercises</i>: Introduction. Laboratory work rules.2. <i>Lecture</i>: Composition and properties of the atmosphere. Air pollution. <i>Exercises</i>: Carbon footprint.3. <i>Lecture</i>: Impact of meteorological factors on air pollution. Cycle of discharge of pollutants from the atmosphere. <i>Exercises</i>: Air quality in the graphic industry.4. <i>Lecture</i>: Ecological aspect of conventional printing techniques (offset printing, gravure printing, flexo printing, and screen printing) impact on the environment, health, and safety risks. <i>Exercises</i>: Chemical deinking flotation, principles, and influencing factors.5. <i>Lecture</i>: Ecological aspect of digital printing techniques, impact on the environment, health risks. <i>Exercises</i>: Disposal of composite materials: composite recycling process.		

	<p>6. <i>Lecture:</i> Ecological aspect of the production and application of printing inks. Biodegradability of inks. <i>Exercises:</i> Recycling of prints using ultrasound.</p> <p>7. <i>Lecture:</i> Knowledge check through a colloquium. <i>Exercises:</i> Durability of inks in defined environmental conditions.</p> <p>8. <i>Lecture:</i> Production of pulp and paper and its impact on air quality. Methods for air purification. <i>Exercises:</i> Durability of printing substrates in defined environmental conditions.</p> <p>9. <i>Lecture:</i> Process and wastewater. Physical, chemical, and biological indicators of water pollution. <i>Exercises:</i> Determination of effective concentration of residual ink on laboratory sheets and application of other spectrophotometric methods of analysis.</p> <p>10. <i>Lecture:</i> Wastewater from conventional printing techniques. Ecological aspect of CTP technology. <i>Exercises:</i> Principle of the method and application of image analysis.</p> <p>11. <i>Lecture:</i> Wastewater from the production of pulp, paper, and recycled paper. <i>Exercises:</i> Determination of organic matter in process waters.</p> <p>12. <i>Lecture:</i> Wastewater from the production of pulp, paper, and recycled paper. <i>Exercises:</i> Determination of organic matter in process waters.</p> <p>13. <i>Lecture:</i> Major determinants of environmental management in printing houses. <i>Exercises:</i> Principle and application of membrane filtration method.</p> <p>14. <i>Lecture:</i> Characteristics of waste from the graphic and related industries. Methods of disposal - landfilling, incineration, recycling. <i>Exercises:</i> Composting of prints.</p> <p>15. Knowledge check through a colloquium. Final colloquium on laboratory.</p>
<p>Required literature (available in the library and/or via other media)</p>	<p>Title</p>

GRAPHIC PROGRAMMING LANGUAGES			Code: 19559
Course teacher	KLAUDIO PAP, MAJA RUDOLF	Course status	optional
Original course title	Grafički programski jezici	Semester (winter/summer)	winter
Teacher's contact email	klaudio.pap@grf.unizg.hr maja.rudolf@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	<p>Training for performing programming tasks using graphical programming languages in graphic engineering. Graphical coordinate space, output coordinate space, and programming of the coordinate grid. Rules for writing commands and parameters in stack-oriented graphical language. Concept of graphic pages and corresponding measuring units. Absolute and relative programming of lines and paths, closing paths and filling them. Creating graphic shapes in multiple layers. Control of line endings, line joining, and line discontinuity. Programming circular and tangential shapes and circular arcs. Bezier curve and its mathematical definition. Types of Bezier curve joining. Joining Bezier curve with tangent curve. Saving and restoring graphic state. Rotations, translations, horizontal and vertical transformations of the coordinate system. Control of object fill and "holes" by programming the orientation of the path clockwise and counterclockwise. Multiple transparencies of objects by even-odd rule of origin ray crossings. Stack memory management. Arithmetic and logical operators in PostScript language (representative of PDL languages). Programming loops in graphical programming languages. Repetition and transformation of graphic shapes. Programming tonal transitions in RGB, CMYK, and HSB color spaces. Grouping graphic shapes. Individual programming manipulation of a letter and converting an envelope to a vector path. Functions of textual strings and data arrays. Program control of font and text in PostScript language. Optimization of memory usage by program stack control.</p>		
Learning outcomes	<p>Evaluation of features of prepress, printing, finishing, and multimedia devices. Defining the type and purpose of a message based on the user, form, and type of graphic media. Applying high-level structured programming languages Using tools and knowledge of technological processes and materials in the design, reproduction, and distribution of visual messages. Applying techniques for processing and designing different media (images, sound, video, photography, animation). Differentiating coordinate system transformations from graphic shape deformations. Constructing programs for lines, curves, arcs, and other types of vector paths. Using programming branching, loops, arrays, and functions in a graphic programming language. Designing programmable graphic elements in different color systems and graphic states. Creating user procedures for later independent use. Applying optimization of memory usage through programmatic control of stack memory in printing devices. Applying programmatic manipulation of individual characters. Applying programmatic control of fonts and text. Expanding the capabilities of standard market programs with custom programs for specific purposes.</p>		

<p>Course content (syllabus)</p>	<ol style="list-style-type: none"> 1. <i>Lecture:</i> Graphic coordinate space, print coordinate space, and programming coordinate grid; <i>Exercises:</i> Programmatic positioning in graphic coordinate space and defining straight paths in it. 2. <i>Lecture:</i> Rules for writing commands and parameters in stack-oriented graphic language, concept of graphic page and associated measurement units; <i>Exercises:</i> Programming control of projected measures and multiple variations of stack writing of graphic command parameters. 3. <i>Lecture:</i> Absolute and relative programming of lines and paths, closing paths and filling them; <i>Exercises:</i> Absolute and relative programming of lines and paths, creating polygons and filling them. 4. <i>Lecture:</i> Control of the final shape of lines, joining lines, and line breaks; <i>Exercises:</i> Programming the final shape of lines, joining lines, and line breaks. 5. <i>Lecture:</i> Programming circular and tangent shapes and circular segments; <i>Exercise:</i> Programmatic implementation of given circular and tangent shapes and circular segments. <i>Lecture:</i> Programming Bezier curves in vector paths; <i>Exercise:</i> Programmatic implementation of a given path using Bezier curves. 6. <i>Lecture:</i> Rotations, translations, horizontal and vertical transformations of the coordinate system; <i>Exercise:</i> Programmatic implementation of object rotation, translation, and reflection, midterm. 7. <i>Lecture:</i> Control of object fill and "holes" with programming of path orientation and control of multiple object transparencies; <i>Exercise:</i> Programmatic implementation of objects with "holes" in multiple possible ways. 8. <i>Lecture:</i> Stack memory management, arithmetic and logical operators in stack-oriented language; <i>Exercise:</i> Use of arithmetic and logical operators with current output of stack memory state. 9. <i>Lecture:</i> Loops in graphic programming languages, repetition and transformation of graphic shapes; <i>Exercise:</i> Repetition, cloning, and transformation of graphic objects. 10. <i>Lecture:</i> Programming tonal transitions in RGB, CMYK, and HSB color spaces; <i>Exercise:</i> Programming color in various color systems and their use on graphic entities. 11. <i>Lecture:</i> Grouping graphic shapes; <i>Exercise:</i> Defining program procedures for groups of graphic shapes and basic manipulations with them. 12. <i>Lecture:</i> Individual program manipulation of a letter character and converting envelope into a vector path; <i>Exercise:</i> Program manipulation of a letter character and converting the envelope into a vector path. 13. <i>Lecture:</i> Functions of text strings and data arrays; <i>Exercise:</i> Programming with a basic set of commands for text strings 14. <i>Lecture:</i> Programmatic control of fonts and text; <i>Exercise:</i> Programmatic control of fonts and text, final exam.

SCIENCE OF ENVIRONMENT AND DESIGN			Code: 38011
Course teacher	IVANA BOLANČA MIRKOVIĆ	Course status	compulsory
Original course title	Znanost o okolišu i dizajn	Semester (winter/summer)	winter
Teacher's contact email	ivana.bolanca.mirkovic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The students are introduced to the global environmental issues, such as air pollution, greenhouse effect, stratospheric ozone depletion, winter and summer smog, water pollution, soil pollution, solid waste, hazardous waste, emission sources, direct and indirect causes of emissions, and design approach in product creation context with the aim of reducing anthropogenic impact on environmental quality. The course content covers the specificities of emissions from the production processes of graphic and related industries, working and user activities with the goal of implementing measures through product design towards the preservation or improvement of environmental quality.		
Learning outcomes	Students will be able to recognize and describe global environmental issues and explain the principles of graphic design in the context of creating products with a lower environmental impact. They will be able to explain the impact of solid waste on the environment and the principles of design in the context of waste reduction. They will be able to explain the principles of design for preventing pollutant emissions. They will be able to list and explain the ecological principles of graphic product design. They will be able to apply design tools in the context of ecological efficiency and differentiate their limitations.		
Course content (syllabus)	<ol style="list-style-type: none">1. <i>Lecture</i>: Introduction, importance of environmental science, general concepts of environmental protection related to design. <i>Seminar</i>: Introduction, individual assignments.2. <i>Lecture</i>: Design and global environmental issues. Air pollution. Greenhouse effect: emission sources, mechanism of formation, impact on the environment. <i>Seminar</i>: Alternative product design using global warming indicators.3. <i>Lecture</i>: Design and global environmental issues II. Winter smog: emission sources, mechanism of formation, impact on the environment, prevention measures. <i>Seminar</i>: Product design and prevention of pollutant emissions causing winter smog.4. <i>Lecture</i>: Design and global environmental issues III. Summer smog: emission sources, mechanism of formation, impact on the environment, prevention measures. <i>Seminar</i>: Design and prevention of primary pollutant emissions causing summer smog.5. <i>Lecture</i>: Design and global environmental issues IV. Destruction of the ozone layer in the stratosphere: mechanism of the destruction process, impact on the environment. <i>Seminar</i>: Design and measures for protecting graphic products from global radiation.6. <i>Lecture</i>: Design and global environmental issues V. Pollutants in water: sources of pollution primarily in the domain of graphic materials, impact on the environment. <i>Seminar</i>: Design of graphic products and prevention of water pollution.		

	<ol style="list-style-type: none"> 7. <i>Lecture:</i> Design and Global Environmental Issues VI: Solid Waste. Hierarchy of Waste Disposal Methods. <i>Seminar:</i> Graphic Product Design Settings in the Context of Waste Reduction. 8. <i>Lecture:</i> Knowledge Assessment through a Colloquium. <i>Seminar:</i> Designer's Impact on Reducing Pollutants during Production and Use of Products. 9. <i>Lecture:</i> Toxic Substances in Air and Water, Environmental Impact. <i>Seminar:</i> Design and Prevention of Emission of Toxic Substances. 10. <i>Lecture:</i> Ecological Aspects of Non-Renewable Energy Sources. <i>Seminar:</i> Product Design with Low Energy consumption through Production and Consumption. 11. <i>Lecture:</i> Ecological Aspects of Renewable Energy Sources. <i>Seminar:</i> Energy Efficiency in the Workplace - Ecological Aspect. 12. <i>Lecture:</i> Ecological Aspect of Transportation. (ECTS 0.21) <i>Seminar:</i> Product Design in the Context of Pollution Reduction during Transportation. 13. <i>Lecture:</i> Design Support Tools that Increase Environmental Impact Reduction Efficiency. <i>Seminar:</i> Solving Examples in the Domain of Graphic Product Design. 14. <i>Lecture:</i> Design Tools in the Context of Ecological Efficiency. <i>Seminar:</i> Solving Examples in the Domain of Graphic Product Design. 15. <i>Lecture:</i> Knowledge Assessment through a Colloquium. Compensation for Justifiably Unheld Student Presentations of Seminar Papers

PRINTING INKS			Code: 19539
Course teacher	SONJA JAMNICKI HANZER	Course status	optional
Original course title	Tiskarske boje	Semester (winter/summer)	winter
Teacher's contact email	sonja.jamnicky.hanzer@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The goal of the course is to acquaint students with the production, composition, and basic properties of printing inks as well as their proper application in graphic technology. Within the course, students acquire knowledge of the properties and special features of printing inks for various printing techniques. Students will acquire basic and practical skills necessary for the selection of printing inks for printing on various substrates to achieve the desired printing quality. Students will also acquire competencies for conducting specific laboratory testing of printing inks.		
Learning outcomes	Explain the chemical and physical properties and the role of each component of printing inks. Explain the rheological properties of printing inks and how they affect print quality. Classify and explain different drying mechanisms of printing inks. Relate the influence of the properties of the substrate, the chemical composition of the printing ink, its viscosity, layer thickness, printing speed and other parameters on the quality of the final print. Determine the optimal combination of ink and printing substrate to avoid printing problems. Explain the properties and composition of inks for various printing techniques. Identify potential printing problems caused by inadequate ink properties. Identify the possible problems that can occur when printing on food packaging.		
Course content (syllabus)	<ol style="list-style-type: none">Components of printing inks:<ul style="list-style-type: none">Use of pigments and dyesInk Vehicles (oils, resins, solvents)Additives and their types, uses and propertiesDrying mechanisms and ink formulations<ul style="list-style-type: none">Absorption dryingOxidation-polymerisation dryingEvaporation dryingQuickset dryingColdset dryingHeatset drying

GRAPHIC DESIGN 1			Code: 32785
Course teacher	MAJA BROZOVIĆ	Course status	compulsory
Original course title	Grafički dizajn 1	Semester (winter/summer)	winter
Teacher's contact email	maja.brozovic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+0+3
COURSE DESCRIPTION			
Course objectives	To obtain the knowledge and acquire the skillset needed in visual design mindful of the user, form and graphic media type. The course is based on the study of the basic elements of the visual structure and their organization into functional optical systems. The analysis of graphic structure comprises of identifying the elementary meanings and data organisation models which follow from the appearance of the text and the readability of the message in accordance to the choice of the shape and size of letterforms as abstract forms and the choice of content and position of pictorial elements as figurative forms. By way of systematic analysis of graphic structure, students will become capable of organizing information in accordance to the type and intent of the message. Structural analysis is considered and conducted on the basis of every graphic media's twofold functionality: operative and persuasive communication. The message can be interpreted according to the goal and users by choosing the appropriate types of sign.		
Learning outcomes	<p>Interpretation and reinterpretation of visual systems.</p> <p>Adjusting readability of graphic composition.</p> <p>Analysing visual message with regard to objectivity level.</p> <p>Apply an appropriate visual structure considering the purpose of the visual message.</p> <p>Show the principles of composing elements of visual form.</p> <p>Sketch the redesigned unit structure of the graphic media.</p> <p>Solve the optically harmonising newspaper page layout.</p>		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Visual structure analysis. Sketch and analyse a newspaper article from the point of view of visual structure. 2. Visual structure analysis. Reinterpret a newspaper article based on the obtained data about its structure. 3. Increasing the readability of the visual message. Increase the readability of a newspaper article by intervention in typography. 4. Increasing the readability of the visual message. Increase the readability of a newspaper article by emphasizing the hierarchy of data. 5. Informational values of the message. Emphasize informative parts of the message compared to redundant ones. 6. Informational values of the message. Define the styles of titles, sub-titles, super-titles, text by applying letter scales and selecting illustrative systems. 7. Measuring the meaning of the message in levels of objectivity. Present the article in operative and persuasive communication. 		

	<ol style="list-style-type: none">8. Order and disorder system Present the topic of the article from another aspect in relation to the target group.9. Animation of a visual message. Animate the obtained content of the article using image information.10. Stylization of the visual message. Stylize the content of the article using rational, conventional signs.11. Principles of composing. Show the static composition of the article in the dynamic relationship of elements.12. Color system. Stratify the hierarchy of information using pairs of contrasting colors.13. Message redesign. Redesigning a newspaper article.14. Optical balance of the graphic media page. On the newspaper page, achieve an optical balance from the obtained number of articles.15. Optical balance of the graphic media page. On the newspaper page, achieve an optical balance from the obtained number of article.

ORGANIZATION OF GRAPHIC PRODUCTS			Code: 19548
Course teacher	DIANA BRATIĆ	Course status	optional
Original course title	Organizacija grafičke proizvodnje	Semester (winter/summer)	winter
Teacher's contact email	diana.bratic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The main objective of the course is to familiarize students with the fundamentals of organizational theory and the factors that influence the organization, design, planning and management of graphic production to enable them to acquire skills for successful management of production, logistics and warehousing.		
Learning outcomes	Identify, analyse, and evaluate the key elements that influence the planning process and the preparation of a business plan. Apply mathematical procedures in the preparation of a unified aggregate and operational production plan. Propose an organizational chart of work units and a productive workplace. Plan capacities. Prepare a cost estimate for a graphic product. Make technological preparations for production. Evaluate, select, and apply database management techniques and tools. Create a project plan.		
Course content (syllabus)	<ol style="list-style-type: none">1. Organization2. Planning3. Production4. Capacity planning5. Calculation6. Preparation and monitoring of work documentation7. Technological preparation of work8. Technological preparation of production9. Production monitoring10. Production management software11. Logistics and internal transport management12. ANALYSIS OF VISUAL STYLE			Code: 284480
Course teacher	VANDA JURKOVIĆ	Course status	optional
Original course title	Analiza likovnog stila	Semester (winter/summer)	summer
Teacher's contact email	vanda.jurkovic@grf.unizg.hr	ECTS credits	2
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+0+2
COURSE DESCRIPTION			
Course objectives	The aim of the course is to master basic art methods in order to create a style. Developing a handwriting or style is an important and extensive process for every author's visual work and begins with the creation of the so-called pasticcio, by adopting a style, not a motive. Students will illustrate thematically assigned media. Students will create new creative solutions by applying historical styles and features. The success of recognizing theoretical and characteristic foundations is applied in a new context for the purpose of creating a portfolio of works. The portfolio will clearly demonstrate the skill of the author to respond to the complex requirements of future clients of visual products.		
Learning outcomes	<ol style="list-style-type: none"> 1. Apply the given elements and features of characteristic styles to the visual solution. 2. Understand morphostylistics in visual solutions. 3. Understand syntactic stylistics and semantic stylistics in visual solutions. 4. Use different illustrator methods to achieve different effects (depth, spatiality...). 5. Design visual solutions. 6. Create a portfolio of author's works. 		
Course content (syllabus)	<ol style="list-style-type: none"> 1. The concept of style by mastering pastiche (Pasticcio, Italian: adoption of style, but not motif) on given topics. 2. The concept of style by mastering pastiche on free themes. 3. Thematic illustrations for default media. 4. Thematic illustrations on free topics. 5. Morphostylistics (style achieved through form and technique). 6. Syntactic stylistics (style for the purpose of achieving readability, credibility, suitability for saying something). 7. Semantostylistics (reading the meaning of style, i.e. the success of information transfer). 8. Caricature illustrations on given and free topics.

MECHANICS AND WAVE PHENOMENA			Code: 284473
Course teacher	KATARINA ITRIĆ IVANDA	Course status	compulsory
Original course title	Mehanika i valne pojave	Semester (winter/summer)	summer
Teacher's contact email	katarina.itric.ivanda@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The aim of the course is to apply fundamental knowledge from fluid mechanics, statics of rigid bodies, electromagnetism, as well as geometric and wave optics in the analysis of technical and technological processes in graphic technology. In the context of hydrostatics and hydrodynamics, students will acquire 56 knowledge that they will later apply in the characterization of printing inks and various fluids used in the graphic industry. Fundamental knowledge of geometric and wave optics, along with the mechanisms of optical interaction of light with materials, will enable students to understand the principles of operation of various optical devices used in quality control. Through laboratory exercises, students will independently or in pairs develop critical thinking and data analysis skills, applying theoretical knowledge in practice and enhancing experimental methods and technical skills.		
Learning outcomes	<ol style="list-style-type: none">1. Analyze the statics of rigid bodies using examples from graphic technology.2. Examine the static and dynamic properties of specific fluids.3. Explain the basic principles of electromagnetism with examples from graphic technology.4. Interpret the principles of geometric and physical optics in simple optical systems.5. Compare sources of radiation based on the mechanisms of light generation.6. Analyze the interactions of light and objects based on simple physical models.		
Course content (syllabus)	<ol style="list-style-type: none">1. Fundamentals of rigid body mechanics2. Statics of rigid bodies3. Hydrostatics of fluids4. Hydrodynamics of fluids5. Electrostatics and electrodynamics6. Photoelectric effect7. Geometric optics8. Physical optics9. Sources of electromagnetic radiation10. Interaction of light and matter

BASIC GRAPHIC MATERIALS			Code: 284479
Course teacher	SONJA JAMNICKI HANZER MAJA STRIŽIĆ JAKOVLJEVIĆ BRANKA LOZO	Course status	compulsory
Original course title	Osnovni grafički materijali	Semester (winter/summer)	summer
Teacher's contact email	sonja.jamnicky.hanzer@grf.unizg.hr maja.strizic.jakovljevic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The aim of the course is to familiarize students with the composition and basic properties of printing inks and paper substrates and their proper use in the graphic arts industry. A further aim is to teach students the properties and special features of substrates and printing inks for the individual printing processes. Students will acquire the basic and practical skills required to make decisions about the selection of printing inks for specific substrates in order to achieve the desired print quality and meet the final purpose of the graphic product. Students will acquire skills to carry out laboratory tests on paper and printing inks related to assessing the stability and durability of prints on the substrate.		
Learning outcomes	<ol style="list-style-type: none">1. Explain the properties of the components of basic graphic materials and their functions within the material.2. Explain the fundamental properties of basic graphic materials with the aim of creating a high-quality graphic product.3. Explain the composition and properties of printing substrates and printing inks.4. Identify possible causes of printing problems resulting from the use of inadequate printing inks and/or substrates.5. Select the optimal printing ink depending on the printing technique, type of printing substrate and the intended use of the graphic product.6. Independently conduct laboratory tests on printing substrates and printing inks, evaluating the durability and stability of prints.		
Course content (syllabus)	<ol style="list-style-type: none">1. Raw materials for the production of printing substrates, types and processing of cellulose.2. Properties of printing substrates defined during production and fiber additives.3. Finishing in the production of printing substrates, coatings.4. Dimensional stability and moisture of fibrous materials.5. General and structural properties of printing substrates.6. Surface and optical properties of printing substrates.7. Mechanical and chemical properties of printing substrates.8. Components of printing inks: Colorants, vehicles and additives in inks.		

	<ol style="list-style-type: none">9. General and rheological properties of printing inks and drying/curing mechanisms of printing inks.10. Identification of possible problems with ink's incompatibility depending on the type of substrate (ink blocking and picking) – Performance of laboratory tests.11. Properties and special features of printing inks for different printing processes (printing inks for letterpress, offset printing, gravure printing, screen printing, inkjet printing).12. Creation of standardized laboratory test prints, ink transfer test – absorption capacity of the substrate for a specific printing ink13. Determination of the colorimetric values of process offset inks on various substrates.14. Mechanical resistance of laboratory prints on various types of paper – Testing the rub resistance of prints.15. Technical specifications of commercially available substrates and printing inks.

FUNDAMENTALS OF COLORIMETRY			Code: 289908
Course teacher	RAHELA KULČAR	Course status	compulsory
Original course title	Osnove kolorimetrije	Semester (winter/summer)	summer
Teacher's contact email	rahela.kulcar@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The goal of the course is to familiarize students with the fundamental concepts of colorimetry and its importance in the graphic industry. Students will master basic methods of color measurement and develop the ability to analyze and interpret spectral data. Special attention will be given to the application of colorimetry in the printing industry, where students will develop skills for quality control and consistency of color in printed materials. The course will also explain the importance of color standardization in the graphic industry and help students develop the ability for critical analysis and evaluation of measurement results.		
Learning outcomes	<ol style="list-style-type: none">1. Analyse factors necessary for quantitative color evaluation.2. Identify deficits in color perception.3. Based on visual assessments and instrumental measurements, comment on the psychophysical properties of color.4. Categorize color measurement devices according to desired data and substrate type.5. Conduct instrumental measurements and graphically present the results.6. Connect instrumental and visual results of color evaluation.		
Course content (syllabus)	<ol style="list-style-type: none">1. Basic Concepts and Principles of Colorimetry.2. Standard Observer as a Key Concept in Colorimetry; Calculation of Tristimulus Values.3. Chromatic Coordinates and Chromatic Diagram (CIExy).4. Uniform Color Space, CIELAB; Concept and Application of the CIELAB System; Advantages of a Uniform Color Space.5. Light and Its Interaction with Materials; Spectral Properties of Light and Materials.6. Color Rendering; CRI Index; Standard Types of Lighting (A, F, D50, D65...).7. Metamerism and Metamerism Index.8. Color Variability (Color Inconstancy).9. Instruments for Color Measurement (Colorimeters, Spectrophotometers); Types and Functions of Measuring Instruments; Geometry of Measuring Devices.10. Influence of Material Characteristics on Color Measurement Results. Color variability (Color Inconstancy).11. Methods of Analyzing Spectral Data; Evaluation and Interpretation of Spectral Measurements.12. Color Systems for Describing Colors (Munsell, NCS System, Pantone...); Application and Importance of Different Color Description Systems.

EXPERIMENTAL AND ANALOGUE PHOTOGRAPHY			Code: 289956
Course teacher	RAHELA KULČAR	Course status	optional
Original course title	Eksperimentalna i analogna fotografija	Semester (winter/summer)	summer
Teacher's contact email	rahela.kulcar@grf.unizg.hr	ECTS credits	3
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+1+1
COURSE DESCRIPTION			
Course objectives	The aim of the course is to encourage students to explore and apply various experimental techniques in black-and-white analogue photography. The course will facilitate the development of practical skills for working in the darkroom, applying techniques for creating photographs without the use of a camera, and familiarizing students with light-sensitive materials and emulsions. By mastering the course, students will be equipped for independent work and research in the field of experimental photography and will develop the ability to integrate different artistic techniques in the creation of hybrid photographic works.		
Learning outcomes	<ol style="list-style-type: none"> 1. Critically analyze key experimental techniques and works of prominent photographers in the history of black-and-white analogue photography and their influence on contemporary photographic practice. 2. Apply various experimental techniques in black-and-white analogue photography. 3. Create photographs without the use of a camera, utilizing different light-sensitive materials and emulsions. 4. Design the integration of different artistic techniques in the creation of hybrid photographic works. 5. Justify the selection of works for a public exhibition. 		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Introduction to Analogue Black-and-White Photography. 2. History of Experimental Techniques, Overview of Notable Photographers and Their Works. Basics of Exposure Elements (Exposure Triangle; Reciprocity Law; Depth of Field; Capturing Moving Objects; Focal Length). 3. Materials and Equipment (Various Types of Films and Light-Sensitive Materials; Darkroom Equipment). 4. Fundamentals of Darkroom Work (Developing Black-and-White Film Process). 5. The Process of Creating Black-and-White Photographs in the Darkroom. 6. Selective Lighting Technique (Varying Density of Darkening and Contrast). 7. Chemical Manipulations in Photography (Chemigrams and Chemograms). 8. Introduction and Demonstration of Alternative Photographic Techniques ("Camera-less Photography"). 9. Experimental Emulsions – Using Different Light-Sensitive Emulsions. 10. Image Transfer and Alternative Processes: Image Transfer Processes for Cyanotype and Salt Print, Combining Analog and Digital Methods. 11. Presentation and Exhibition of Works: Preparing Works for Exhibition, Organizing and Participating in the Final Exhibition.

BOOK PROTOTYPE DESIGN			Code: 289914
Course teacher	SUZANA PASANEC PREPROTIĆ	Course status	optional
Original course title	Projektiranje prototipa knjige	Semester (winter/summer)	summer
Teacher's contact email	suzana.pasanec.preprotic@grf.unizg.hr	ECTS credits	3
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+0+2
COURSE DESCRIPTION			
Course objectives	By acquiring basic knowledge about the types and formats of books, as well as developing the essential practical skills required for their creation, students will be able to design and produce their own books. Familiarising themselves with the characteristics of materials, tools, and software required for book production, students apply fundamental aesthetic principles in the design of books through practical work, considering their content and purpose. Students are encouraged to present and realise their own ideas, and through short discussions related to their project assignments, they enhance their engineering, social, and communication skills while critically comparing the main advantages and disadvantages of books.		
Learning outcomes	<ol style="list-style-type: none"> 1. Categories the basic book types, formats, and bookbinding forms. 2. Analyse the fundamental parameters and aesthetic principles necessary for planning, designing, and producing books. 3. Use materials, tools, devices, and software for book production. 4. Argue the design of books. 5. Compare the main advantages and disadvantages of different book types. 		
Course content (syllabus)	<ol style="list-style-type: none"> 1. The development, significance, and definition of the book today. 2. Distinguishing the basic book types, formats, and bookbinding forms. 3. Classification of books according to their content and purpose. 4. Analysis of the fundamental parameters of books. 5. Establishing the basic aesthetic principles in the book design process. 6. Materials, tools, devices, machines, and software for book production. 7. Planning, designing, and producing a book. 8. Advantages, challenges, and the future of traditional and contemporary book formats. 9. Characteristics of on-demand and personalised book production. 10. Basic concepts in book publishing.

TYPOGRAPHY			Code: 289904
Course teacher	IVANA ŽILJAK STANIMIROVIĆ	Course status	compulsory
Original course title		Semester (winter/summer)	summer
Teacher's contact email	ivana.ziljak.stanimirovic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The aim of this course is to acquaint the students with the historical, theoretical and practical aspects of typography, with an emphasis on the application of typography in design and visual communications, digital media, and printing press. Students will acquire knowledge about the classification of typography regarding to historical development and optical characteristics, learn how to select and apply appropriate typography in design to improve readability, aesthetics and functionality of multimedia and printed products. By mastering the course, the student will be able to apply the knowledge of solving the tasks of standardizing typefaces for use on different platforms, adding diacritical characters for the Croatian language, designing and realizing the author's individualized typeface, and fonts and pictograms for use in signage.		
Learning outcomes	<ol style="list-style-type: none"> 1. Describe the development of typography through the classification of letters, recognize the partition into different letter categories and explain the terms and rules in typography and typographic measurement systems. 2. Analyze the anatomy of typography, identify parts of typefaces such as serif, x-height, baseline, spacing, typeface size, styles, typographic rules in design, multimedia and print. 3. Apply knowledge of the anatomy of typography through font redesign and editing of characteristic diacritical characters for the Croatian language within the selected typeface, as well as characters for international use, interpret advantages and disadvantages and optimize typographic solutions. 4. Use knowledge about planning, design and realization of individualized vector typographic solutions through the design of an author's designer or handwritten font in specialized programs and generate the font for use on different platforms. 5. Design specialized typographic characters, Pi fonts, pictograms and symbols for use in signaling and multimedia. 6. Categorize typography through personal analysis of digital fonts and summarizing knowledge about typographic standards in visual communications, design, print and multimedia. 		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Historical development of typography, development of typographic styles and their application throughout history. 2. Theory and terms in typography, typography in use, typographic principles and rules in typography. 3. Basics of character design, spacing between letters, lines and text in the graphic design. 4. Anatomy of typography, detailed study of the parts of letter characters and their function, definition of the rectangle - square position and letter lines. 5. Bezier's curve and vector graphics as the basis of letter character outline. 		

	<ol style="list-style-type: none">6. Introduction to the software package for creating a font, instructions for creating an individualized digital font through practical project tasks.7. Analysis and creation of characteristic diacritical characters for the Croatian language within the selected script, as well as characters for international use.8. Designing and creating a handwritten template for original individualized typography in the form of a handwritten or individualised design font.9. Transformation of letter characters into digital form and template processing in graphics programs for image and text processing.10. Creation of typographic solutions within the font creation program, alignment of thickness values, spacing, testing, generating and exporting font.11. Presentation and application of font in graphic design.12. Design and design Pi fonts, pictograms and symbols for use in signaling and multimedia.13. New modern classification of typography, individualized selection, database creation through classification and font family.14. Standardization in modern formats such as TrueType, OpenType, ClearType and variable fonts.15. Design and use of typography on different platforms for application in design and visual communications, digital media, and printing press.

PACKAGING DESIGN			Code: 289916
Course teacher	IVANA ŽILJAK STANIMIROVIĆ	Course status	optional
Original course title		Semester (winter/summer)	summer
Teacher's contact email	ivana.ziljak.stanimirovic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The aim of the course is to train students for the design process in the development of packaging design. Students will acquire knowledge and competences in packaging design planning according to the given steps, from setting the project task, analysis, design, development of the solution to visualization of the prototype and finally presentation. By mastering the course, students will gain knowledge of how to design packaging as an independent product and they will use communication tools. Through this course, students will acquire knowledge and competences about conceptual thinking, branding, aesthetics and functionality of design and products, as well as practical skills in prototype design and working with relevant software tools for designing and visualizing packaging design. The goal is to provide knowledge and competence through an iterative design process in creating a recognizable visual identity of packaging which sets the product apart from the competition, to include an interdisciplinary approach to related courses necessary for the sustainable development of packaging, and to courses which include implementation solutions for printing and packaging realization.		
Learning outcomes	<ol style="list-style-type: none">1. Describe the basics of packaging design and methodological approaches in the development of packaging design.2. Analyze the selected product, compare competing products and adapt the design to the target group.3. Distinguish the elements of graphic design, aesthetic and functional aspects through the selection of shape, typography, color, vector and raster graphics in the process of designing and preparing packaging.4. Apply knowledge through designing packaging design from sketch to prototype creation, form elements of visual identity and graphic standards.5. Demonstrate practical skills in making and visualizing prototypes, improve work with relevant software for design and prepress of packaging.6. Present the project from research, analysis and concept to the design and visualization of the prototype and evaluate the design solutions.		
Course content (syllabus)	<ol style="list-style-type: none">1. Introduction to packaging design and basics of packaging design.2. Getting to know the design process through the selection and definition of the project task.3. Analysis of the selected product, a competitive product analysis, examination of the market and target groups.4. Setting up a creative concept, designing packaging design from conceptual solutions and sketches to prototype development through a design model and an iterative process.		

	<ol style="list-style-type: none">5. Positioning of elements of visual identity and recognizability of the packaging, branding, logo design, defining colors, shapes, primary and secondary typography, determining the hierarchy of information on packaging.6. Vector and pixel graphics on packaging.7. Coding, legal requirements and mandatory informations on packaging, intelligent packaging and recognition of security graphics on packaging.8. Planning the use of packaging and functional packaging solutions.9. Adaptation of the design to the target group.10. Prototyping, design and visualization of the design solution.11. Design and evaluation of packaging through an interdisciplinary and iterative approach with the possibility of connecting with related courses such as integration of practices for sustainable packaging development, packaging production processes, printing and material technology and 3D visualization.12. The final presentation of the project from the concept and design of the packaging to the visualization of the prototype, presentation of the basic graphic standards and visual identity of the packaging and evaluation.
Required literature (available in the library and/or via other media)	Title

GRAPHIC DESIGN 2			Code: 32786
Course teacher	MAJA BROZOVIĆ, DOROTEA KOVAČEVIĆ, JOSIP BOTA	Course status	compulsory
Original course title	Grafički dizajn 2	Semester (winter/summer)	summer
Teacher's contact email	maja.brozovic@grf.unizg.hr dorotea.kovacevic@grf.unizg.hr Josip.bota@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+0+3
COURSE DESCRIPTION			
Course objectives	To obtain the knowledge and acquire the know-how in designing a visual message with respect to specific features of particular graphic media and the corresponding graphic-editorial practice. In the framework of the course students will learn how to organize visual forms into functional visual systems of particular graphic media. Students will analyse specific features of each graphic media in regard to the type and intent of the message, its character/nature and form, as well as technical and technological limitations of each media type in presenting messages. Students are requested to offer the best solutions for presenting this information through various types of graphic media based on the given input. Through active participation in the course lectures and practical application of the presented principles students will get acquainted with characteristics of newspapers and magazines as key representatives of periodical graphic media, picture books as specific educational and entertainment type of media whose visual structure is adjusted to a particular age group, and posters as a representative of outdoor advertisement media.		
Learning outcomes	Create a conceptual sketch of the hierarchy of optical values of the relationship between the structural elements of the newspaper page. Organise visual hierarchy of information on predefined newspaper format - planning a coherent system of magazine layout design. Organising grid systems for various magazine content - suggesting design solutions for effective advertisement communication. Ability of combining aesthetic and technological factors in presenting visual messages by means of outdoor advertisement media. Illustrating and designing picture-book as an educational graphic media form.		
Course content (syllabus)	<ol style="list-style-type: none">1. Organization of the visual structure of the newspaper page. Sketching the visual structure of the newspaper page with regard to the defined number of articles - raster page.2. Organization of the visual hierarchy of information of the newspaper page. Design a visual hierarchy of articles on a newspaper page based on a sketched raster.3. Designing another newspaper page while maintaining defined parameters (margins, number of columns, text styles, etc.). Design the left/right newspaper pages that will form a single entity with the page from the previous exercise.		

	<ol style="list-style-type: none"> 4. Monochrome newspaper printing: possibilities and limitations in creating information hierarchies. Design a monochrome newspaper page in relation to the obtained number and importance of articles using the defined parameters from the previous exercise. 5. Newspaper cover page - persuasive communication. Design the cover page of the newspaper from the obtained number of information with a focus on persuasive communication. 6. Magazine as a graphic media: definition, types of magazines, design specifics. Present the visual structure of one thematic unit of the magazine through a certain number of pages. 7. Types and application of grid system in thematic unit design of magazines Sketch grid system for the journal according to different thematic units. 8. Consistency of the visual hierarchy of individual thematic units with a grid system Design two pages of different thematic units and apply different grids while maintaining the visual recognition of the magazine. 9. Introductory pages of the magazine, specifics in the design and presentation of information. Design the introductory pages of a certain thematic unit of the magazine. 10. Magazine cover page - design aimed at the target group. Design a magazine cover page in relation to a defined target group. 11. Advertising messages in magazines. Illustrate the solution of an advertisement in a magazine on a given topic and target group. 12. Outdoor advertising media - lapidary solutions. Illustrate a lapidary poster solution on a given topic and target group. 13. Outdoor advertising media - temporal solutions. Illustrate the temporal solution of the poster on the given topic and target group. 14. Picture book - specifics, suitability for the child's age. Sketch the main characters of a picture book for a certain age of the child. 15. Aesthetic, pedagogical, technological parameters of the picture book. Design and present an art-graphic solution for the cover and two inside pages of the picture book using sketches of the main characters throughout the story.

Teacher's contact email	tajana.koren.ivančević@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	1+0+2
COURSE DESCRIPTION			
Course objectives	Students will learn to program text display for print and digital media. Text programming for printed media is performed through PostScript. Character envelope programming. Programming repeating text with the introduction of variables that change their values through a loop. Text programming by given path. Changes on each letter character. Positioning and alignment of text. Filling letters with other elements. Text programming for the web. Introduction of individualized fonts on web pages. Text styling, alignment and positioning. Animation text through HTML and CSS. Character display programming through ActionScript. Possibility of manipulation of the appearance of letters by introducing random numbers. Text input in SVG. Text animation in SVG technology. The possibility of choosing a medium for displaying typography.		
Learning outcomes	The student will be able to distinguish the media in which typography appears. The student will be able to program the way the typography will be displayed in the print medium. The student will be able to program a way to which typography will be displayed on the web. The student will be able to distinguish and define individual webs technologies for displaying typography. The student will be able to implement typography in animation.		
Course content (syllabus)	<ol style="list-style-type: none">1. Programming text appearance for print media through PostScript. Checking the programmed text through the GS View browser.2. Programming text repetition using loops. Introduction of variables.3. Filling the letter characters with other elements. Filling the letter path with other elements.4. Programming the path along which the text is displayed. Manipulation of each character separately.5. Text manipulation through random numbers. Exercises – colloquium.6. Programming text for display on the web using HTML and CSS.7. Text styling through CSS.8. Transforming text on the web.9. Animating text on the web using HTML and CSS.10. Animating text through ActionScript. Exercises – colloquium.11. Text manipulation through ActionScript and random numbers.12. Displaying text on the web through SVG.13. Text animation through SVG.		

	14. Interactivity in SVG by mouse over and click. 15. Programming text in SVG using gradients and filters. Exercises – colloquium.

QUALITATIVE RESEARCH METHODS OF COLOUR REPRODUCTION			Code: 19561
Course teacher	RAHELA KULČAR	Course status	optional
Original course title	Kvalitativne metode ispitivanja reprodukcije boja	Semester (winter/summer)	summer
Teacher's contact email	rahela.kulcar@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	This course aims to provide students with theoretical and practical knowledge of colour, enabling them to develop independent ideas and solutions related to the assessment of colour reproduction quality. Students will gain a fundamental understanding of the science of colour and its perception. Throughout the course, students will learn to communicate through colour and become acquainted with some intuitive colour systems. They will also become familiar with the characteristics of light sources, their impacts on observed colours and substrates, and how to leverage their advantages and disadvantages. Emphasis will be placed on independently determining colour characteristics based on instrumental measurements. With the knowledge acquired, students will be able to choose colour systems, and measurement techniques, and interpret results effectively.		
Learning outcomes	The student will be able to connect fundamental knowledge in the field of colour with its multidisciplinary aspects in the field of colorimetry. Categorize colour measurement devices, propose the most suitable measurement method based on the substrate type, justify the choice of the device, and critically assess differences in reproduced colours compared to standards.		
Course content (syllabus)	<ol style="list-style-type: none">1. Fundamentals of the Science of Color and its Perception.2. Characteristics of Light Sources.3. Characteristics of the Sample Under Examination.4. Colour Perception (Psychophysical Experience of the Observer).5. Theories of Color Vision.6. Simultaneous Contrast, Color Vision Deficiency.7. Psychophysical Aspects of Color.8. Determination of Tristimulus (X, Y, Z) Values.9. CIE Chromaticity Diagram.10. Limitations of the CIE Chromaticity Diagram.11. CIELAB Color Representation System.12. Determining Total Color Difference.13. Colour Measurement Standards (Ostwald System, Munsell System, NCS System).14. Metamerism.15. Standard Measurement Geometries, Color Measurement Devices, Device Selection for Color Measurement.

APPLICATION AND INVESTIGATION OF PRINTED MATERIALS			Code: 19563
Course teacher	MAJA STRIŽIĆ JAKOVLJEVIĆ, BRANKA LOZO	Course status	optional
Original course title	Primjena i ispitivanje grafičkih materijala	Semester (winter/summer)	summer
Teacher's contact email	maja.strizic.jakovljevic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The aim of the course is to familiarize students with various aspects of functional applications that are achieved by printing, especially ink-jet technology, with an explanation of its advantages as a non-impact technique, to point out the variety of functions that can be achieved through the choice and combination of materials, to introduce students to upcoming trends, to direct them towards own creative ideas.		
Learning outcomes	Students will be able to list and describe different types of 2D codes; Explain the technology of 3D ink-jet printing; List the materials used in 3D printing; Be able to explain what chromogenic inks are and the mechanism of the colour change; Be able to list and explain different types of chromogenic inks; Explain which part of the RFID system is printable; Explain the differences between electronic paper and other screen products and explain the principle of electrophoresis; Find out about other functional applications and development and application possibilities.		
Course content (syllabus)	<ol style="list-style-type: none">1. Review of content, presentation of various aspects of printed functional applications; definitions of basic terms.2. Explanation of function and principles of 2D code generation, types, explanation of interactivity.3. Limits of reading 2D codes and error correction system, intentional design errors as a function of creativity.4. Electronic book, principle of e-paper screen operation, differences compared to other screen products.5. The working principle of the e-paper screen, electrophoresis.6. Explanation of 3D printing technique, types and principles of AM, 3D InkJet printing, development of color printing, differences.7. The purpose of 3D printing by areas, development and perspectives, examples, 3D scanning, use of 3D printing records.8. Materials for 3D printing, types of powder, binder function, color function, infiltrators, role and differences by type.9. The first written intermediate knowledge test.10. Explanation RFID, parts, printed parts, antennas, other printed electronics, examples.11. Explanation of the concept of chromogenic inks, types, division according to different criteria, purpose of inks.12. Thermochromic inks, types and mechanisms of color change, biochromic inks, indicators, types.13. Bio-paper, explanation of different uses, biocides in/on paper, application.14. Other examples of functional applications, advantages of InkJet technique, microscreen printing and other examples.		

	15. Second written knowledge test.

BOOKBINDING 1			Code: 19557
Course teacher	SUZANA PASANEC PREPROTIĆ	Course status	optional
Original course title	Knjigoveštvo 1	Semester (winter/summer)	summer
Teacher's contact email	suzana.pasanec.preprotic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The course follows finishing processes throughout publishing and craft bookbinding. It studies the bookbinding and binding block system types. It focuses on establishing the characteristics of bookbinding regarding bookshelf system, binding unit, adhesive and paper types. The aim of the course is to find the best solutions within the frame of bookbinding engineering. Practical work focuses on specific details including individual handmade book. It allows the students to understand a complex network of binding technology. Students are asked to write seminar paper on the course topics during the semester. Also, student needs to create handmade book of his choice. The oral speech is also included to the students give explanations about binding design. The final grade (with marks 2, 3, 4, or 5) is the average of the grades obtained through seminar papers and work practice.		
Learning outcomes	Students understand how to properly choose engineering book concepts which leads binding efficiency. Students can correctly identify binding standardized procedure within Standards Framework ISO/TC 130. Students are able to give examples how to cope with technological bindery style processes. Students can reliably demonstrate how to tailor paper features in order to optimize the visual-tactile book appearance. Students can correctly present comprehensive binding knowledge by constructing a handmaking prototypes.		
Course content (syllabus)	<ul style="list-style-type: none"> • Bookshelf classification system • Bookbinding types (paperback, hardback, mechanical) • Binding block systems (adhesive, thread and wire stitching, comb) • Binding units' type (individual sheets/leaf, folded sheets) • Adhesive binding methods (double-fan and rough spine) • Differences between Craft bookbinding and Book publishing • Finishing process steps (cutting, folding, gathering, binding block systems, trimming) • Technological principle of binding block system • Classification and type of folded sheet • Basic gathering principles (collating, inserting) • Craft binding block variants (side wire stitching, thread-stitching with linen tape) • Perfect binding diagram (block spine processing and gluing) 		

	<ul style="list-style-type: none">• Adhesive type applications (PVAc, hot-melt, PUR) in bookbinding• Perfect binding strength rating (pull test, FOGRA standard)• Paper suitability for perfect binding (high grades papers, recycle and wood-contained papers)• Book covers in craft bookbinding• Bookbinding materials and equipment• Creating handmade book (design bindings to suit specific projects)

OFFSET PRINTING MANAGEMENT			Code: 19469
Course teacher	IGOR ZJAKIĆ, IRENA BATES	Course status	optional
Original course title	Upravljanje ofsetnim tiskom	Semester (winter/summer)	summer
Teacher's contact email	igor.zjakic@grf.unizg.hr irena.bates@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	To teach students how to obtain and standardize a printing quality in different printing techniques.		
Learning outcomes	The course provides students with basic knowledge about standardization and quality management of various printing techniques. The subject teaches the principles of reproduction of raster elements, how their deformation affects the reduction of print quality, how print quality is managed with the help of measuring fields, how visual control is used to identify and solve printing problems, then, the subject teaches how to standardizes the printing process and how modern computer systems achieve uniform and high-quality printing. In addition to the above, students learn about hi-fi printing techniques and ways to increase quality in reproduction, as well as ways and methods of varnishing in printing, which achieves a higher quality graphic product.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Introduction to the subject. The importance of quality in printing. The link between technology and design. Expectations and global quality trends. Separation of products by quality. Defining the quality of different printing techniques. 2. Colour in printing, importance of color in commercial purposes, problems of defining quality with customers, principles of multi-color reproduction in printing with technological process. 3. Raster systems and error assumptions. Advantages and disadvantages of different types of rasterization, deformation of raster elements. 4. Errors in printing, causes, methods of detection, sequence of printing and connection with machines, Geometrical deformation of raster elements, examples. Optical deformation of raster elements, examples, realistic and optimal reproduction. 5. Printing methods, control strips, signal and measurement strips. Shearing, duplicating, smearing, color density, color density range, reproduction of microlines, examples. 6. Methods of establishing the geometric deformation of raster elements. Colour density range. 7. Methods of establishing the geometric deformation of raster elements. Colour density range. 8. Calibration and characterization procedures, Fogra principles, GATF, field D, K/S fields. Transfer of tonal values, Hartmann system of programmed printing, control system Felix-Brunner, measuring microelements, degrees of coloring, control system Gretag. 		

	<p>9. Proper definition of print quality, tone error in print, grayness of color in print, color efficiency in print, relative print contrast, color acceptance. Print order.</p> <p>10. Mixed color printing. Color difference control methods. Quantitative detection of missing colors in mixing, color gamut and print behavior. Pantone, HKS etc.</p> <p>11. The difference between mixed and CMYK color printing. Defining colors. The link between design and reproduction of the final product.</p> <p>12. Printing errors. Toning, excess wetting solution, wiping, damaged TF, damaged rubber cover, deformations of the printing material affecting the quality, scraping, improper powdering, appearance of unwanted lines in the print.</p> <p>13. Reduction and methods of increasing color reproduction in printing. Hi-Fi printing methods - Hexachrome, Opaltone, MaxCYM, highly pigmented printing, printing with additional mixed colors. Increasing color reproduction, methods of achieving greater commercial effect, advantages of Hi-Fi printing.</p> <p>14. Printing management - CPC 1, 2, 3, 4, PRINECT, PECOM, MaxNet, DoNet, etc. Possibilities and quality improvements, speeding up work, importance of the link between management and apparatus production management. Varnishing in printing - classic oil varnishes, water-dispersive varnishing, UV varnishing on prints with classic colors, UV colors and hybrid colors, methods, advantages and disadvantages, inducing different commercial effects, examples.</p> <p>15. Colloquium</p>
<p>Required literature (available in the library and/or via other media)</p>	<p>Title</p>

QUALITY CONTROL			Code: 96535
Course teacher	DIANA MILČIĆ	Course status	compulsory
Original course title	Kontrola kvalitete	Semester (winter/summer)	summer
Teacher's contact email	diana.milcic@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	BSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	Quality control course introduces students to the product and process control. Students will acquire knowledge on planning methods and tools to ensure quality in graphical industry. By the end of the course students will have ability to understand the criteria and standards of applied techniques and methods for assure quality of product, industrial process and any process in company.		
Learning outcomes	Critically evaluate contemporary concepts of quality. Apply quality management tools and methods. Apply statistical techniques for quality improvement and decision making. Use statistical packages to monitor and evaluate process quality. Estimate the appropriateness of the conclusions from the obtained data.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Basic principles of modern quality control and basic terms in the quality field. Development of statistical methods of quality control. Quality definitions. 2. Quality costs. Control costs. Taguchi's philosophy. Taguchi loss function. 3. Statistical methods of quality control. Analysis of normally distributed data. Analysis of non-normally distributed data. 4. Process capability assessment and analysis. Process capability coefficients. Process stability. 5. Choice of control method. Sampling and sampling plans. 6. Sampling plans for attributes. AQL, AOQL and LQ concept. Sampling plans according to standards. 7. Mathematical basis of sampling plans. How to calculate the OC and AOQ curve points. Risk calculation. Supplier Quality Index (Bendix). 8. Sampling plans for variables. Sampling plans according to s-method. 9. Sampling plans for variables: R-method, sigma-method. Lot-plot test chart. 10. Introduction to SPC. Sensitivity of control charts. Application. Types of variations. Process "under control". 11. Control charts for variables. Shewhart control charts. 12. Control charts for attributes. 13. Capability of the measurement system. Determination of R&R using control charts. 14. Quality improvement methods. FMEA analysis. 15. Quality control tools. Checklist. Pareto analysis. Brainstorming. Ishikawa diagram.

Courses from graduate study programme (MSc) – General information

DIGITAL PRINTING FORM			Code: 19476
Course teacher	IGOR MAJNARIĆ	Course status	optional
Original course title	Digitalni tisak	Semester (winter/summer)	winter
Teacher's contact email	igor.majnaric@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	Students deepen the theoretical foundations based on Computer to Press and Computer to Print technologies. All relevant NIP printing technologies will be analyzed in more detail, including their basic working principles. They learn about the design features of digital printing machines that can print from rolls and sheets, whose role is crucial for creating a quality print. During the course, problems caused by the interaction of printing substrates, printing inks (toners), and other factors that can be found in the working environment (digital printing press) are identified. During the class, students will create computer templates and print prints using different digital techniques, after which they will compare them with each other, applying various measurement methods to evaluate the quality of reproduction. The evaluation will be performed using advanced methods of image analysis, with a standard comparison based on densitometric, colorimetric and spectrophotometric measurement methods.		
Learning outcomes	Students will be able to list all digital printing techniques and determine their direct application with regard to productivity and print quality. After passing the course, students will be able to explain in detail all construction variants of digital printing machines (Electrography, Inkjet, Magnetography, Ionography, Electrography, Photography, Thermography, X-graphy) together with the basic processes that take place during the generation of a print. This alone will allow for quantitative and qualitative evaluation. For the two most dominant digital printing techniques (Inkjet and Electrophotography), students will be able to prepare hand-made digital files, and print them with the desired adjustment of adequate settings on the printer (using linearization and appropriate ICC profiles). For the needs of digital printing, students will be able to critically select adequate consumables (printing substrates and inks) and in accordance with them in order to achieve adequate print quality. On the basis of theory and practice obtained during lectures and exercises (performed by densitometric and colorimetric measurements), the student will be able to independently evaluate conventionally printed and digitally printed prints and assess which of them is more applicable for the realization of different graphic products.		
Course content (syllabus)	<ol style="list-style-type: none">1. Introductory lecture (def. rights and responsibilities of students, def. seminars in Digital Printing, def. literature). Introductory exercise (def. rights and duties of students, def. necessary equipment and literature).2. Digital printing systems, the difference between individual and mass. Personalization and printing on the claim. Presentation of Non-Impact Printing (NIP) technologies, Applications in digital printing, and development trends. Creating your one-page digital product in the Adobe Illustrator application (print 4/0). Production of P.S. file, creating a PDF file suitable for digital printing on known machines (known PPD and precisely defined driver).		

3. Part I: basics of the electrostatic process. Photosensitive materials and properties of photoconductors. Powder and liquid toners. Chronological development of EP printing machines. Stages of formation of black and white EPs. of imprints Drum photoreceptor impingement processes. Creating your own double-sided printed digital product in the Adobe Illustrator application (print 4/4). Production of P.S. file, which is printed in margo, creation of a PDF file suitable for digital printing on an HP Indigo machine (known PPD and precisely defined driver).
4. II. part: the basis of the electrophotographic process. Lighting modes ROS and LED. Principle of laser operation. Modulation of laser radiation. Laser beam directors. The principle of image formation in photocopiers. Presentation of the creation of digital products in Adobe Acrobat applications with the help of a plug-in for digital imposition (standard book sheets and non-standard book sheets). Printing examples on the Laserjet 9050 dn printer, defining sheet rotation, activation of digital finishing.
5. III. part: The the basis of the electrophotographic process. Principles of development in electrophotographic machines. Principles of possible transfers in electrophotography. Creating your multi-page digital product in Adobe Acrobat applications with the help of a plug-in for digital imposition (standard book sheets and non-standard book sheets).
6. III. part: The the basis of the electrostatic process. Principles of fusion of electrophotographic prints. Fusing with rollers, non-contact fusing, fusing with solvents. Principles of photoreceptor cleaning. Creating your digital product that contains special effects. Generating files for automatic cutting, Generating special spot colors, Activation of achromatic and metallic colors, and Generating files for in-line varnishing (segment varnishing and varnishing of certain samples). Creation of files for personalized printing.
7. Constructions of multi-colored EPs. machines. Transport systems for guiding paper. Finishing options for electrophotographic machines. Possible special effects.
8. COLLOQUIUM. Description of the basic structure of the HP Indigo printing machine. Disassembly of basic machine components, description of their structure and purpose.
9. Working principle of the ionographic printing process. Ionographic machine constructions. Postulates of magnetism, the principle of magnetography, construction of magnetographic machines of the coloring system, and carrying out the calibration procedure of the machine. Paper transport adjustment and duplex unit adjustment.
10. Principle of operation of electrographic printing machines. Principle of operation of thermographic machines. The working principle of photographic machines. Types of printing substrates for photographic printing. Working with HP Indigo RIP. Sending performed files to RIP. Adjustment of separations, printing, and correction of prints (colors, positions).
11. Principle of formation of droplets. Continuous InkJet printing. Principle and operation of binary InkJet printing. The principle and operation of guided IRIS printing. Working principle of thermal Inkjet, Variants of construction of the basic cell and tank. Achieving photo quality printing. Test printing in the Inkjet technique. Performing linearization within color management software (EFI RiP). Generating the ICC profile of the production footprint. Test printing with the application of the desired profile.

	<p>12. The working principle of piezoelectric InkJet printing. Variants of the structure of the basic cell. Principle of operation of the Electrostatic InkJet. Cell structure. Achieving higher resolution in print. Ultrasonic Inkjet. Dyes for InkJet printing techniques. Presentation of basic machine components of UV LED Inkjet, description of their structure and purpose. Working with Roland's RIP. Printing specially created files. (Cutting and printing, varnishing, spot color, and white color printing).</p> <p>13. Working principle of X-graphic printing systems. Direct imaging, Electrography, TonerJet printing, Nanography. The working principle of hybrid digital printing. Making a print using the principle of indirect thermal transfer. Preparation of the transfer medium and its transfer to the shirt. Creating a doom effect as a possibility to create a special relief pattern.</p> <p>14. Machines for digital printing with permanent printing form. The principle of creating a permanent form with a laser in offset printing machines. Construction of digital machines with permanent printing form. Satellite machines based on Computer to Press technology. Changing the shape without removing it from the machine. Tandem Computer to Press machines. Change of printing form. Dyes and printing media. Other Computer to Press printing technologies. Visit (excursion) a Croatian digital printing house.</p> <p>15. COLLOQUIUM</p>

PACKAGING PRINTING			Code: 19438
Course teacher	IRENA BATES	Course status	optional
Original course title	Tisak ambalaže	Semester (winter/summer)	winter
Teacher's contact email	Irena.bates@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The possibility of applying knowledge of packaging and label printing methods. The possibility of applying knowledge of quality management in offset printing. The possibility of applying knowledge of quality management in flexographic printing. The possibility of applying knowledge of quality management in gravure printing. The possibility of applying knowledge of quality management in screen printing. The possibility of applying knowledge in the quality management of digital printing. The possibility of applying knowledge of decoration, protection and coding methods. The possibility of applying knowledge in the use of packaging materials. The possibility of applying knowledge of standardization of printing quality in packaging printing. The possibility of analyzing and synthesizing the reproducibility parameters of the packaging and label printing process.		
Learning outcomes	Categorize the history of packaging and label printing. Categorize the printing materials. Evaluate and categorize packaging printing technologies. Analyze trends and standards that describe the quality of packaging and label printing. Categorize and propose an environmentally friendly way of packaging printing. Categorize and propose decoration and protection and categorize codes. Evaluate the quality of packaging and label printing Suggest how to improve the quality of flexographic, offset and gravure printing.		
Course content (syllabus)	History of packaging and label printing. Methods and possibilities of packaging printing with letterpress printing. Advantages and disadvantages of packaging printing with letterpress printing technique. Types of printing substrate and methods of packaging printing. Printing on flexible and rigid substrates. Methods and possibilities of packaging printing using offset printing. Advantages and disadvantages of packaging printing with offset printing technique. International trends and quality standards in offset printing. Methods and possibilities of packaging and label printing with gravure printing technique. Advantages and disadvantages of packaging printing with gravure printing technique. International trends and quality standards in gravure printing. Methods and possibilities of packaging and label printing with flexographic printing technique. Advantages and disadvantages of packaging printing using flexographic printing technique. International trends and quality standards in flexographic printing. Methods and possibilities of packaging printing with screen printing technique. Advantages and disadvantages of packaging printing using screen printing technique. International trends and quality standards in screen printing. Processes and possibilities of packaging printing with digital printing technique. Advantages and disadvantages of packaging printing using digital printing technique. International trends and quality standards in digital printing. Environmental awareness in		

	packaging and label printing (types of printing substrate, types of inks, recycling of packaging, etc.). Types of decoration and protection. Types of codes and labels used to transmit stored information.

APPLICATION OF DIGITAL PHOTOGRAPHY IN REPRODUCTION MEDIA			Code: 19473
Course teacher	MAJA STRGAR KUREČIĆ	Course status	optional
Original course title	Primjena digitalne fotografije u reprodukcijским medijima	Semester (winter/summer)	winter
Teacher's contact email	maja.strgar.kurečić@grf.unizg.hr	ECTS credits	4
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	Teach the basics of digital photography with a balanced emphasis on technical, aesthetic and conceptual skills. Provide students with creative and technical assignments to make personal work. Provide students with the skills to analyse and critique images in a global context.		
Learning outcomes	Use practical image capture and editing skills in digital photography. Understand exposure techniques in manual mode. Classify image capture equipment and judge suitability of the equipment for a given photography project. Evaluate and interpret aesthetics and concept of a photography project. Demonstrate creative and critical communication through the visual medium of photography. Create a portfolio of work.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Anatomy of a DSLR camera. 2. Camera Lens. 3. Understanding exposure (ISO / aperture / shutter). 4. Image size and quality. 5. ISO sensitivity and image quality. 6. File format - RAW vs. JPEG. 7. Image editing in Adobe Photoshop. 8. Visual design concept. 9. Composition. 10. Basic principles of lighting. 11. Studio portrait / outdoor portrait. 12. Creative photographic techniques. 13. Photo essay. 14. Context in Photography. 15. Final Project Presentation.

HOLOGRAPHY			Code: 19498
Course teacher	KATARINA ITRIC IVANDA VLADIMIR CVILJUŠAC	Course status	optional
Original course title	Holografija	Semester (winter/summer)	winter
Teacher's contact email	katarina.itric.ivanda@grf.unizg.hr vladimir.cviljusac@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The aim of the course is to acquire fundamental and specialized knowledge in holography and it's implementations in graphic technology.		
Learning outcomes	The aim of the course is to acquire fundamental and specialized knowledge for implementation of holography in graphic technology. Students will be able to define the basic physical principles that must be followed in the design, production, and application of holograms. Identify the basic physical assumptions related to the relationships between the finished graphic product, printing technology, design solutions, and holograms. Recognize the potential applications of holograms in graphic technology. Identify different possibilities for realizing holograms within a graphic product with respect to different design solutions. Identify the optimal method for producing holograms used in the graphic industry. Recognize different types of holograms and their specific applications in graphic technology. Select optimal solutions for designing holograms as a graphic product. Define and apply protective elements of holograms and the level of protection required for a specific graphic product. Acquire basic knowledge for creating computer-generated holograms.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Introduction 2. Coherent Light Optics I 3. Coherent Light Optics II 4. Simple transmission holograms I 5. Simple transmission holograms II 6. White-Light Transmission Holograms 7. Reflective holograms 8. Synthetic and computer-generated holograms 9. Holographic interferometry 10. Holographic materials 11. Hologram printing I 12. Printing holograms II 		

	13. Holography and information technologies 14. Holographic Imaging technology 15. Art and Holography

GRAPHIC DESIGN 3			Code: 33072
Course teacher	MAJA BROZOVIĆ	Course status	compulsory
Original course title	Grafički dizajn 3	Semester (winter/summer)	winter
Teacher's contact email	maja.brozovic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	1+0+3
COURSE DESCRIPTION			
Course objectives	<p>To obtain the knowledge and acquire the skills in design of a sign as a carrier of a message with regard to the functions that the message should convey. Course is focused on systematic analysis of symbols and the concept of creating meaning through visual communication. Form, in the context of visual communication, is thought of as a means for information transmission through graphic media communication systems. Symbols (signifiers) are not analysed on the basis of case studies, but rather as integral parts of an organised information system. Particular attention is given to notions and definitions of sign and meaning, as given by various influential authors. Through lectures and practical exercises, students study visual forms from the standpoint of their structure, as highly or scarcely structured symbols, and their respective formal appearance. The development of the tendency towards reduction of figurative shapes to wholly abstract signs is being considered. Pictorial systems and their practical application are studied, including standardised systems of pictograms in everyday use. Semantic analysis is carried out concerning general functions of symbols and their application in shaping visual messages through: relations between symbol and referent, author and message, parts and whole of the message, assessment of appropriateness of a symbol structure regarding target audience, accessibility of the visual message and the contribution of the graphic structure in clarifying the message's content. Through practical work, students will obtain knowledge and acquire skills for designing signs on the basis of content, attitude, inventiveness, context, non-content factors and style.</p>		
Learning outcomes	<p>Create different signs with respect to structuredness. Analyse signs and their meanings. Integrate signs into a unique formal system. Propose a suitable illustrative system for the presentation of information. Design a sign in accordance with the focus on a particular function in the communication process.</p>		
Course content (syllabus)	<ol style="list-style-type: none"> 1. A highly structured sign. Concept and solution of a highly structured sign on a given topic. 2. A low-structured sign. Concept and solution of a low-structured sign on a given topic. 3. Pictograms. Design the defined number of signs as a unique system of pictograms. 4. Analysis of sign and meaning. Reduce the given figurative form to a completely abstract sign through a certain number of phase – sketching. 5. Illustrative systems. Reduce the given figurative form to a completely abstract sign through a certain number of phase – realization. 6. Illustrative systems. Illustrate a specific location with independent signs. 		

	<ol style="list-style-type: none">7. Illustrative systems – examples. Corrections of the selected illustrative system according to the information hierarchy.8. General sign functions. Design a certain product with regard to the level of quality.9. Referential function of the sign. Present the animation of a stylized form through a certain number of phase.10. Emotional function of the sign. Present personal view of a certain concept in the form of a sign.11. Aesthetic function of the sign. Form sign for concepts characterized by symmetry and rhythm.12. Conative function of the sign. Show signs for different target groups.13. Contact function of the sign. Design sign with an emphasized contact function.14. Metalinguistic function of the sign. Present sign with an emphasized metalinguistic function.15. Representation of individual sign functions. Analyse the obtained sign through the representation of individual functions.

WEB DESIGN 1			Code: 40782
Course teacher	JESENKA PIBERNIK	Course status	compulsory
Original course title	WEB dizajn 1	Semester (winter/summer)	winter
Teacher's contact email	jesenka.pibernik@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	Students are being trained in the design and testing of websites using user-centered design methods.		
Learning outcomes	<p>Plan goals, purpose, content structure, and interface.</p> <p>Design user interaction with the interface.</p> <p>Devise target audience, personas, customer journey mapping, task analysis, flow modelling.</p> <p>Identify and apply user-centered design process methods: user interviews, card sorting, tree testing, guerrilla usability testing, creating and annotating wireframes and prototypes, writing micro-copy for the website.</p> <p>Integrate typography, images, icons, and video into a cohesive web design of a specific style.</p> <p>Design websites that are functional, attractive, useful, and user-friendly.</p> <p>Create a design specification for websites (design-spec).</p> <p>Use typography and color in web design.</p> <p>Define principles of accessibility and inclusivity in web design.</p> <p>Use basic HTML, CSS technologies.</p>		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Introduction, fundamentals of information architecture. Definition of rights and duties of students, definition of exercises, definition of literature, presentation of students' work from previous years, definition of necessary equipment. 2. Website development process using user-centered design methods. Application to SILK / setting up a group blog - students are required to actively participate and track their progress on SILK throughout the semester. 3. Defining the target audience. Depending on prior knowledge, slice PSD to HTML (convert a given PSD file into an HTML page) or design and code a small HTML page with multiple subpages, menu, tables, video, and images. 4. Defining purpose and goals. Initiation of website documentation - defining goals, researching future users (conducting surveys, interviews), and shaping research results. 5. User scenarios and task analysis. Group/individual work: beginning the design of the first individual page in exercises, creating sketches/LOFI wireframes. 6. Design principles. Group work: card sorting and tree testing for the final website. Incorporating testing into project documentation. 7. Conceptual sketches. Creating flowcharts, user journey, and CX maps. 		

	<ol style="list-style-type: none">8. Prototyping. Group/individual work: creating HIFI wireframes, a fully functional prototype of the page.9. Hierarchical organization, networks. Group/individual work: Testing prototypes on a real target user group - documenting and presenting test results, making wireframe adjustments based on test results.10. Navigation organization. Designing an individual website according to wireframes in software of choice.11. Web colors. Adjustments to documentation/design/wireframes.12. Web typography. Commenting on individual pages, voice and tone according to personas (addressing users, writing micro-copy, "human interface").13. Form design. Complete specification of individual web page.14. Icon design. Website evaluation, user testing.15. Final presentation. Preparation for the final presentation.

SELECTED CHAPTERS OF QUALITY MANAGEMENT			Code: 19477
Course teacher	DIANA MILČIĆ	Course status	optional
Original course title	Odabrana poglavlja upravljanja kvalitetom	Semester (winter/summer)	winter
Teacher's contact email	diana.milcic@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+2+0
COURSE DESCRIPTION			
Course objectives	The goal of the course is to familiarize students with different methods of quality improvement and quality management, and management systems, in order to apply them in the optimization of the graphic reproduction process.		
Learning outcomes	Develop a critical understanding and knowledge in quality related management concepts, disciplines and techniques. Develop knowledge of the approaches and methodologies used to achieve continuous improvement, assurance, governance and leadership in quality. Design and implement and critically evaluate Quality systems.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Basic principles of quality management, process approach 2. Integrated quality management systems 3. Integrated quality management systems, application to graphic production 4. Continuous improvement methods (PDCA, Kaizen, Crosby), General improvement approach 5. Quality management system according to ISO 9000 6. Quality management system according to ISO 9000 7. Total quality management TQM 8. Application of TQM on graphic production process 9. Six sigma 10. Application of "six sigma" on graphic production process 11. "Leana" management 12. Application of "Leana" " on graphic production process 13. QFD - quality function development 14. FMEA – analysis of possible errors and consequences 15. Knowledge management

MULTIMEDIA COMMUNICATIONS 2			Code: 19496
Course teacher	IVANA ŽILJAK STANIMIROVIĆ	Course status	optional
Original course title	Multimedijske komunikacije 2	Semester (winter/summer)	winter
Teacher's contact email	ivana.ziljak.stanimirovic@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	<p>Knowledge of advanced multimedia communications and technologies, interactive "rich media", communication via the Internet and communication on the cloud. Designing and generating individualized multimedia coded information and communication through applications, "near field" communication and communication in augmented reality. The course deals with advanced multimedia communications and technologies, interactive "rich media" and mobile App design. Programming of multimedia elements of text, image, sound, video, and interactive form as the highest level of multimedia. An overview of the development of multimedia from the "desktop publishing" revolution to the "post pc" period is given. New technological achievements are analysed in order to plan the future of multimedia and design advanced multimedia communications, design process of mobile App design and innovations. Share of multimedia in communication via the Internet. Internet development, HTML5 and the future of application development. The future of mobile multimedia devices and mobile App design. New generation of services for creativity, production. Applications for designing multimedia content on tablets. Designing animation of graphic products such interactive 3D book for presentation in multimedia environments, publishing on the web. Connecting multimedia content on the cloud, Adobe "creative cloud". Coded multimedia content, coded marking of graphic products, coded communication. Generation and design of individualized 2D codes, QR codes and labels for advanced multimedia communication. Implementation of coded information in conventional graphic product, business documentation and packaging for direct connection to cloud databases. Barcode readers and infrared cameras for automatic controls and cash registers, verification of coded information. Work with optical readers and applications I-nigma, Neo Reader, Custom Tag. Communication in augmented reality, visual - near IR area. Codes in NIR and "Near field" communication. Communicating via the cloud. The benefits of multimedia, attention, connectivity, interactivity, and individualization.</p>		
Learning outcomes	<p>Integrating knowledge from advanced multimedia communication and interactive rich media. Categorization of mobile multimedia devices in order to plan new generations of services for creativity and production. Creating animation of a graphic product in multimedia environments. Using knowledge about modern network communication, the development of the internet and the future of application development, mobile app design. Connecting multimedia content on the cloud. Designing individualized 2D codes, QR codes and labels for advanced multimedia communication. Designing multimedia marking of graphic products for automatic reading and checking. Designing communication in augmented reality, visual - near IR area.</p>		

Course content (syllabus)

1. *Lecture:* Advanced multimedia communications and technologies, interactive "rich media". Programming multimedia elements of text, image, sound, video and interactive form as the highest level of multimedia. *Exercise:* Getting to know tools for creating multimedia codes and planning an individualized multimedia presentation.
2. *Lecture:* An overview of the development of multimedia from the "desktop publishing" revolution to the "post pc" era. *Exercise:* Work with text, image, sound, video and interactive format standards, formats and display on different devices and platforms.
3. *Lecture:* New technological developments, multimedia future planning and design advanced multimedia communications, application and innovation. *Exercise:* Creation of a form for multimedia presentation in HTML standard. Incorporation of individualized and designed multimedia content of images, text and interactive form.
4. *Lecture:* The share of multimedia in communicating via the Internet. The future of mobile app development. The future of mobile multimedia devices. *Exercise:* Embedding your own presentation in an HTML standard, document and connecting all content in the form of a personal multimedia presentation. Installation of an interactive form for multimedia communication in the form of questions and answers for the survey.
5. *Lecture:* Coded multimedia content, coded labeling of graphic products, coded communication. *Exercise:* Creating an individualized QR code and checking its readability. QR code processing in programs for vector and pixel graphics.
6. *Lecture:* Generation and design of individualized 2D codes, QR codes and tags for advanced multimedia communication. *Exercise:* QR Code Redesign – embedding an image into the background and front of the codes, getting to know the limitations and possibilities of designing an individualized QR code.
7. *Lecture:* Implementation of coded information in a conventional graphic product, business documentation and packaging for direct connection to databases. *Exercise:* Modification of the QR code - embedding the logo in the QR code.
8. *Lecture:* Barcode readers and infrared cameras for automatic controls and cash registers, coded verification information. Work with optical readers and applications I-nigma, Neo Reader, Custom Tag. *Exercise:* Designing a personal Vcard code and its individualized multimedia content with associated multimedia presentation of personal data.
9. *Lecture:* New generation services for creativity and production. Applications for professional design of multimedia content on tablets. *Exercise:* Creation of individualized Custom TAG code and readability check. Getting to know the possibilities and limitations in individualization through computer graphics.
10. *Lecture:* Individualization of computer graphics, and embedding in HTML standard language. *Exercise:* Adding individualized elements to CustomTag elements, embedding personal individualized data and connecting to a personal multimedia presentation. Selection and presentation of selected 2D codes.
11. *Lecture:* Designing presentation of a graphic product such as packaging, interactive book for presentation in multimedia environments, web publishing. *Exercise:* Designing animation of a graphic product, basic elements in animation.
12. *Lecture:* Connecting multimedia content on the cloud, Adobe "creative cloud". Designing 3D presentation of a graphic product. *Exercise:* Packaging with individualized codes.

	<p>13. <i>Lecture:</i> Communication in augmented reality, visual - near IR area. <i>Exercise:</i> Designing presentation of a graphic product with individualized codes on the cover.</p> <p>14. <i>Lecture:</i> New generations of devices for multimedia communication, mobile app design process. <i>Exercise:</i> Designing an interactive mobile App design prototipe.</p> <p>15. <i>Lecture:</i> Comparison of codes in NIR and "Near field" communication. The future of marking graphic product for multimedia application. Advantages of multimedia; connectivity, interactivity and individualization. <i>Exercise:</i> Multimedia presentation of app design with the use of image, sound, text, video in the presentation, and the use of coded structures and interactive entry into multimedia content.</p>

COMPUTER TYPOGRAPHY			Code: 19471
Course teacher	IVANA ŽILJAK STANIMIROVIĆ NIKOLINA STANIĆ LOKNAR	Course status	optional
Original course title	Računarska tipografija	Semester (winter/summer)	winter
Teacher's contact email	ivana.ziljak.stanimirovic@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	<p>Knowledge of the application of typography in sophisticated graphic environments and programming languages. Designing typography within a full-page break in the original PostScript language for design solutions which require individualization. Preparation of the letter for high editions with individualized digital printing. Typesetting programming and conversions and transition to formatting for web and Clear Type standards. Unicode, font bases for different operating systems. Designing in OpenType scalable format. Line code programming: bar codes, transport, library applications. Typography design within individualized 2D code with alphanumeric characters. Programming of individualized typography with links from databases. Special purposes: protective syllable, numbering, microtext. Comparison, development and commonalities and differences of PostScript, HTML and Photo Typesetting. Typography planning for different operating systems and for different printing technologies. Individualized raster elements within the letterpress structure. Typography within lenticular 3D systems. Dynamic typography and Actionscript programming of dynamic deformation of letter characters. SVG typography, rotation, Bezier curve typography for multimedia applications.</p>		
Learning outcomes	<p>Designing individualized typography with software solutions in the original PostScript language. Typography design in vector graphics. Knowledge of tabular typeface programming and conversions and the transition to formatting for the web and the Clear Type standard. Knowledge of line code programming, font code and typography design within individualized 2D code with alphanumeric characters. Design of protective logo, numbering, microtext. Designing individualized raster elements within the structure of letter cut. Designing typography within lenticular 3D systems. Creating dynamic typography using actionscript and SVG technology.</p>		
Course content (syllabus)	<ol style="list-style-type: none"> <i>Lecture:</i> Designing typography within a full-page break in the original PostScript language for design solutions that require individualization. <i>Exercise:</i> Typography design in native PostScript language. <i>Lecture:</i> Typesetting for high-run edition in personalized digital printing. Numbering of high volumes. <i>Exercise:</i> Preparation of letterhead for individualized digital printing, numbering as a software solution. <i>Lecture:</i> Tabular programming and conversions and transition to formatting for web and Clear Type standard. <i>Exercise:</i> Web Tablet Style Programming and Clear Type Standards. 		

	<ol style="list-style-type: none"> 4. <i>Lecture:</i> Unicode, font bases for different operating systems. <i>Exercise:</i> UNICODE code system. Tabular syllable conversions. 5. <i>Lecture:</i> Designing in OpenType scalable format. <i>Exercise:</i> Exercise in OpenType scalable format. Typography design in OpenType format. 6. <i>Lecture:</i> Line code programming: bar codes, transport, library applications. <i>Exercise:</i> Code font programming. 7. <i>Lecture:</i> Typography design within individualized 2D code with alphanumeric characters. <i>Exercise:</i> Typography within an individualized 2D code. 8. <i>Lecture:</i> Programming individualized typography with database links. <i>Exercise:</i> Typography design in vector graphics and programmatic connection with links from databases. 9. <i>Lecture:</i> Lecture on special purposes and applications of typography: guard syllable, numbering, microtext. <i>Exercise:</i> Exercises with programmatic definition of microtext, readability of protective typography. 10. <i>Lecture:</i> Comparison, development, and commonalities and differences of PostScript and HTML. <i>Exercise:</i> Postscript exercise and comparison of PostScript and HTML. 11. <i>Lecture:</i> Typography planning for different operating systems and for different printing technologies. <i>Exercise:</i> Tabular typeface conversions and transition to formatting for the web and the Clear Type standard. 12. <i>Lecture:</i> Individualized raster elements within the letterpress structure. <i>Exercise:</i> Defining individual raster elements in PostScript and embedding them in a typography outline. Rasterization of letter characters. 13. <i>Lecture:</i> Typography within lenticular 3D systems. Legibility rules with respect to line spacing. <i>Exercise:</i> Designing typography within lenticular 3D systems, practicing on different lenticular plates with regard to line spacing, defining program solutions in PostScript. 14. <i>Lecture:</i> Dynamic typography and action script programming of dynamic deformation of letters characters. <i>Exercise:</i> Character deformation in actionscript. Dynamic typography. 15. <i>Lecture:</i> SVG typography, rotation, Bezier curve typography for multimedia applications. <i>Exercise:</i> Dynamic typography exercises using Action script and SVG technology.

MOTION GRAPHICS			Code: 53571
Course teacher	JESENKA PIBERNIK	Course status	compulsory
Original course title	Pokretna grafika	Semester (winter/summer)	winter
Teacher's contact email	jesenka.pibernik@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	The aim of the course is to explore the narrative possibilities of motion graphics as a new medium that combines text and graphics in motion. Students will acquire basic knowledge of progressively solving complex visual problems from the design perspective (motion choreography, dramatic structure) and technology (Adobe suite).		
Learning outcomes	Integrate visual vocabulary (typography, images, icons, and video) into a cohesive project. Interpret meanings and emotions conveyed through composition, movement, pace, sound, form, and image depending on the target audience. Apply advanced techniques of Adobe graphic programs. Evaluate the properties of motion (info) graphics in relation to graphic design, web design, information design, and film. Apply basic principles of animation. Apply appropriate creative techniques (effects within the composition) and technical standards in the process of creating motion graphics. Ability to work effectively in a team and successfully manage workload and time.		
Course content (syllabus)	<ol style="list-style-type: none">1. Introductory lecture - definition of student rights and duties, definition of exercises, definition of literature, presentation of student works from previous years, definition of necessary equipment2. History and development of motion graphics<ul style="list-style-type: none">• Animation techniques• Task: Creating a stop motion animation3. Traditional and computer-generated motion graphics<ul style="list-style-type: none">• Basics of animation in Adobe After Effects• Task: Creating motion graphics in After Effects4. Individual contributions to the development of motion graphics<ul style="list-style-type: none">• Motion design – design for space and time (elements of spatial structuring and framing)• Task: Simulating the spatial relationship of elements and framing using motion graphics5. Film credits and trailers (subtitling)<ul style="list-style-type: none">• Kinetic typography• Task: Representing connotative meanings of words using motion graphics6. Motion graphics concepts: Book announcement<ul style="list-style-type: none">• Kinetic typography – sentence animation (animated poster)		

	<ul style="list-style-type: none"> • Task: Conveying a message in a temporal medium using typographic elements and simple geometric shapes 7. Motion graphics concepts: Digital book 8. Moving typography: Conveying meaning and emotions through motion (word) <ul style="list-style-type: none"> • Real - virtual: Combination of real footage and motion graphics elements • Task: Using keying technique to create motion graphics emphasizing the interaction between video footage and virtual elements of motion graphics 9. Moving typography (sentence) <ul style="list-style-type: none"> • Project task: presentation of project tasks • Task: Selecting a project task theme and conducting an analysis of motion graphics of competitive products 10. Movement choreography: Interpretation of space and time <ul style="list-style-type: none"> • Project task: personas • Task: Defining the target audience and creating a minimum of 3 persona examples 11. Concept articulation: conclusion <ul style="list-style-type: none"> • Project task: brainstorming • Task: Conducting brainstorming related to the project task theme and creating a mental map 12. Concept articulation: construction of space <ul style="list-style-type: none"> • Project task: storyboard • Task: Creating a storyboard for the project task 13. Styles and editing techniques: Sequence composition <ul style="list-style-type: none"> • Project task: storyboard – Part 2 (task: Correction of the storyboard) 14. Styles and editing techniques: Transitions <ul style="list-style-type: none"> • Project task: realization • Task: Implementation of the project task – motion graphics in Adobe After Effects 15. Final presentation <ul style="list-style-type: none"> • Project task: realization • Task: Implementation of the project task – motion graphics in Adobe After Effect

MARKETING COMMUNICATIONS			Code: 19463
Course teacher	DIANA BRATIĆ	Course status	optional
Original course title	Tržišne komunikacije	Semester (winter/summer)	winter
Teacher's contact email	diana.bratic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The main objective of the course is to familiarise students with the role and importance of marketing techniques and tools in modern business. Students will be provided with the necessary theoretical and practical knowledge to understand marketing concepts in specific business environments and acquire the necessary skills to develop marketing strategies by combining and integrating different elements of the marketing mix in synergy with the principles of graphic design, and to carry out marketing activities.		
Learning outcomes	Proposals for the optimal design of the communication mix. Proposing the structure of an integrated communication plan and drafting a communication strategy and tactics. Selecting the most appropriate media for conveying specific messages. Select appropriate forms of advertising for a product, service, brand or company. Prepare an advertising plan and an advertising budget plan. Evaluate the advertising campaign in terms of communication efficiency standards. Strategically integrate promotional activities, institutional advertising and sponsorship into marketing communications. Strategically integrate sales promotion, personal selling, and direct marketing into marketing communications. Measure the effectiveness of marketing communications. Establish a long-term relationship plan with customers.		
Course content (syllabus)	<ol style="list-style-type: none">1. Communication and marketing.2. Integrated marketing communication.3. Elements of communication and visual identity.4. Marketing mix configuration.5. Promotion mix configuration.6. Advertising and advertising plan.7. Institutional advertising, publicity, sponsorship, and PR.8. Personal selling, direct and interactive marketing.9. Branding and image.10. Packaging and marketing communication.11. Digital marketing.12. Social networks marketing.13. Integrated communication plan.		

	14. Consumer behavior and influence on purchase. 15. Measuring the effectiveness of marketing communication.

INTRODUCTION TO THE THEORY OF EXPERIMENTAL WORK			Code: 19494
Course teacher	KATARINA ITRIC IVANDA	Course status	optional
Original course title	Uvod u teoriju eksperimentalnog rada	Semester (winter/summer)	winter
Teacher's contact email	katarina.itric.ivanda@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The aim of the course is to acquire basic and professional knowledge, skills and abilities to implement experimental design techniques to improve the production process in graphic technology.		
Learning outcomes	<p>Becoming familiar with experimental design. Preparatory actions (collecting literature, selecting collaborators, etc.). Observation and experimentation. Resolution and propagation of errors. Testing hypotheses. Hypotheses, models, theories, and laws. Defining and analysing measured quantities. The possibility of designing and analysing comparative experiments. Experimental noise (error) and its sources. Types, propagation and elimination of noise. Data acquisition. The existence and treatment of possible alternative hypotheses. Uncertainty (measurement inaccuracy) and experimental design. Building models. Assessing and deciding which factors to use in modelling. Monitoring experiments. Reviewing sampling methods. Deciding when computer simulation can replace experimentation. Statistical processing. Interpretation of measured data. Characteristics of instruments and sensors. Instrument and sensor noise. Standards and common measurements of some quantities. Calibration of instruments and sensors. Determining instrumental function. The course applies fundamental and general knowledge in the analysis of technical and technological processes, classification and explanation of actions and processes within technological units, and applies knowledge from mathematics, chemistry, physics, and modern computer tools to scientific and engineering problems. Also, it enables students to use appropriate mathematical techniques and concepts to obtain quantitative solutions to problems in the graphic industry. This course aims to enable students to understand the logic behind experimental design, understand the factors that promote better experimental design, understand the logic behind inferential statistical testing, present statistical analysis results accurately, concisely and coherently. To apply their understanding of experimental design and statistics, and critically evaluate published research. Furthermore, students will learn to design experiments in the field of graphic technology (both technology and design) and report the results in the necessary scope and structure. (Variations of this objective could be used in traditional lectures and courses, as well as in laboratory courses), conduct (or simulate) an experiment in the field of graphic technology (e.g. paper aging) and report the results, develop a mathematical model or computer simulations to correlate or interpret the results of the experiment, interpret data, that is, state and discuss several possible reasons for deviations between predicted and measured results in the experiment, choose the most likely reason and justify the choice, and formulate methods to confirm the explanation.</p>		
Course content (syllabus)	<p>Introduction and objectives. Science and Scientific Method.</p>		

	<p>Experimental design in different fields. Experimental Design in Different Fields - NOISE. Visit to the laboratories at the Faculty of Graphic Arts. Foundations of Experimental Design (I): Causality, Variables, Control, Sampling. Basics of experimental design (II): Validity, reliability, types of experimental projects. Measurement in Experiment: Methods and Methodology. Introduction to descriptive statistics. Error analysis (uncertainty analysis) I. Error analysis (uncertainty analysis) II. Induction and Pattern Recognition. Information Manipulation. Presentation of research proposal; conclusions on experimental research I. Presentation of research proposal; conclusions on experimental research I</p>
<p>Required literature (available in the library and/or via other media)</p>	<p>Title</p>

PACKAGING AND ENVIRONMENT			Code: 19441
Course teacher	IVANA BOLANČA MIRKOVIĆ	Course status	optional
Original course title	Ambalaža i okoliš	Semester (winter/summer)	winter
Teacher's contact email	ivana.bolanca.mirkovic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	Students identify and recognize ecological symbols on packaging with many examples in order to recognize them. Introducing students to the impact of packaging materials and packaging products on the environment. Students learn about the importance of different types of packaging materials and their contribution to the environment in terms of energy consumption and pollution. They learn about new nano and smart materials and find out their balance in relation to environmental pollution. Students identify possible problems in the healthiness of the packaging product (especially food). Possible ways of recycling or disposing of the packaging product as the end of one life cycle of the packaging product and the opening of a new life cycle, all with the aim of increasing sustainability.		
Learning outcomes	Students will be able to recognize the ecological symbols on the packaging and know their meaning. Students will know the ecological impact on the environment through all phases of the packaging product's life cycle. Students will be able to compare the amount of energy required to produce packaging materials and packaging. Students will be able to evaluate the impact of the production of packaging materials (cellulose, paper, PE-LD, PE-HD, PVC, PET, glass, and metal) on the environment. Students will be able to recognize the possible impact on the health of a packaging product. Students will be able to list new packaging materials and their impact on the environment. Students will be able to classify legal legislation. Students will be able to propose a way to recycle or dispose of the packaging product.		
Course content (syllabus)	<ol style="list-style-type: none">1. <i>Lecture</i>: Introduction. <i>Seminar</i>: Introduction, individual assignments.2. <i>Lecture</i>: The role of packaging. Location of packaging for promotional purposes. <i>Seminar</i>: Packaging design as a carrier of packaging product promotion.3. <i>Lecture</i>: The role of packaging. Location of packaging for promotional purposes. <i>Seminar</i>: Packaging design as a carrier of packaging product promotion.4. <i>Lecture</i>: Impact on air and water quality by pulp and paper production. <i>Seminar</i>: Gradation of pollutants from the pulp and paper industry.5. <i>Lecture</i>: Ecological aspect of the production of PE-LD, PELLD, PE-HD, PVC, PET. The ecological aspect of the production of glass and metal packaging. <i>Seminar</i>: Polymerization. Properties of polymers.6. <i>Lecture</i>: Printing on the packaging and the environment. Packaging security in the context of migration. <i>Seminar</i>: Impact of packaging on human health. Diseases.		

	<p>7. <i>Lecture</i>: Nanotechnology and paper, cardboard and plastic packaging. <i>Seminar</i>: Nanotechnology - new materials. The impact of nanomaterials on the environment and human health.</p> <p>8. <i>Lectures</i>: Colloquium Seminar: Smart packaging and the environment.</p> <p>9. <i>Lecture</i>: Complete waste management system. Ordinance on packaging waste. <i>Seminar</i>: Legal acts in the Republic of Croatia and the EU.</p> <p>10. <i>Lecture</i>: Disposal of used paper and cardboard packaging. Composting, landfilling, and burning. <i>Seminar</i>: Ecological approach to the end of life of a packaging product.</p> <p>11. <i>Lecture</i>: Methods of recycling paper and cardboard packaging. <i>Seminar</i>: Problems in the recycling of multilayer paper packaging. Sticky particles.</p> <p>12. <i>Lecture</i>: Influence of printing technique, type of dye, and printing substrate on the quality of recycled fibers. The ecological aspect of the recycling process: CO₂ balance, heavy metals, and organochlorine compounds. <i>Seminar</i>: Ecological valorization of the quality of recycled fibers.</p> <p>13. <i>Lecture</i>: Methods of plastic recovery. Seminar: Material recovery.</p> <p>14. <i>Lecture</i>: Ecological aspects of glass packaging recycling and recovery of metal packaging. <i>Seminar</i>: Energy recovery.</p> <p>15. <i>Lecture</i>: Colloquium Seminar: Compensation for missed seminars.</p>

BROADBAND NETWORK APPLICATIONS			Code: 19504
Course teacher	TIBOR SKALA	Course status	optional
Original course title	Širokopojasne mrežne primjene	Semester (winter/summer)	winter
Teacher's contact email	tibor.skala@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	Knowledge of broadband technologies and training for independent broadband design applications for mobile technologies and optimization of multimedia content for broadband applications. Electromagnetic spectrum and digital communications. Information transfer media: copper wire, optical fiber, radio transmission, satellite transmission, microwave, infrared and laser. Definition throughput, bandwidth and long distance communication. Broadband networks. The basics digital telephony, ISDN and development towards broadband connectivity. Types of broadband access: xDSL technologies, optical technologies, electric power network lines (PLC), satellite technology and wireless connections. Interactive broadband multimedia communications. Application of XML language for describing data content and filtered projected rendering via XSLT and SVG technology for different types of display technologies and operating systems in broadband network devices. The use of HTML5 and CSS3 technology in multimedia applications in broadband networks applications.		
Learning outcomes	Students will know: Preparation of complex design tasks for the design and realization of a graphic product in accordance with resources. Valorization of the elements of a particular phase of the implementation of the plan in relation to the set task (plan research, production, design). Planning and evaluation of processes and necessary resources in accordance with the development of graphic technology. Application of graphic engineering knowledge in the field of functional applications (printed electronics, prototyping, bioprinting, mobile applications). Modeling of the graphic process with highly structured programming languages. Optimization of process procedures in graphic reproduction. Developing ideas for shaping and communicating visual messages in the form of new media. Analyze the electromagnetic spectrum and types of media for information transmission. To compare bandwidths, bandwidths and the impact of noise on communications over long distances. Distinguish types of broadband access. Design broadband applications for mobile technologies. Optimizing multimedia content for broadband applications.		
Course content (syllabus)	<ol style="list-style-type: none">1. <i>Lecture:</i> Electromagnetic spectrum and digital communications; <i>Exercises:</i> Creating short programs using HTML5 technology.2. <i>Lecture:</i> Information transmission media: copper wire, optical fiber; <i>Exercises:</i> Creating short programs using HTML5 technology.3. <i>Lecture:</i> Information transmission media: radio transmission, satellite transmission, microwave, infrared, and laser; <i>Exercises:</i> Creating short programs using HTML5 technology.		

	<ol style="list-style-type: none"> 4. <i>Lecture:</i> Definition of Bandwidth, Bandwidth and Long Distance Communications; <i>Exercises:</i> Creating programs using HTML5 technology. 5. <i>Lecture:</i> Broadband networks; <i>Exercises:</i> Creating programs using HTML5 and CSS3 technology. 6. <i>Lecture:</i> Basics of digital telephony, ISDN and development towards broadband connectivity; <i>Exercises:</i> Creating programs using HTML5 and CSS3 technology. 7. <i>Lecture:</i> Types of broadband access: xDSL technologies; <i>Exercises:</i> Creating a program using HTML5 and CSS3 technology, colloquium. 8. <i>Lecture:</i> Types of broadband access: optical technologies, lines power networks (PLC); <i>Exercises:</i> Creating programs using XML, HTML5, and CSS3 technologies. 9. <i>Lecture:</i> Types of broadband access: satellite technologies; <i>Exercises:</i> Creating programs using XML, HTML5, CSS3, and Javascript technologies. 10. <i>Lecture:</i> Types of broadband access: wireless connections; <i>Exercises:</i> Creating programs using XML, HTML5, CSS3, and Javascript technologies. 11. <i>Lecture:</i> Interactive broadband multimedia communications; <i>Exercises:</i> Creating an interactive application for broadband use. 12. <i>Lecture:</i> Application of XML language for the description of data content and filtered design display for different types of display technologies and operating systems in broadband network devices; <i>Exercises:</i> Creating an interactive application for broadband use. 13. <i>Lecture:</i> Application of XML language for the description of data content and filtered design display for different types of display technologies and operating systems in broadband network devices; <i>Exercises:</i> Creating an interactive application for broadband use. 14. <i>Lecture:</i> HTML5 and CSS3 technologies in multimedia applications in broadband network applications; <i>Exercises:</i> Creating an interactive application for broadband use. 15. <i>Lecture:</i> HTML5 and CSS3 technologies in multimedia applications in broadband network applications; <i>Exercises:</i> Creating an interactive application for broadband use, colloquium.

GRAPHICS OF THE DOCUMENTS AND SECURITIES			Code: 19491
Course teacher	IVANA ŽILJAK STANIMIROVIĆ	Course status	optional
Original course title	Grafika dokumenata i vrednosnica	Semester (winter/summer)	winter
Teacher's contact email	ivana.ziljak.stanimirovic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	<p>Design of graphics for individualized documents and securities with planned protection against forgery. The subject deals with security graphic elements on documents and securities. An analysis of the project task of creating graphics for documents and securities is being carried out. Design of all elements on documents and securities, examples on wallets, tickets, passports, postage stamps. The typography of the denomination, microtext, and the planning of hidden information are analyzed and designed in visual, ultraviolet and near-infrared spectrum. Marks for the blind and visual impairment, watermark and portrait. Subordination of typography to the requirements of security printing: for letterpress, intaglio and screen printing. Line and pixel graphics as information and as anti-copying technology. Planning of engraving and transition graphics in mutually different securities performance technologies. Planning of graphics on documents depending on the sequence of implementation technologies: design of metal and UV threads in paper, analysis of UV and infrared inks, design of protective graphics for intaglio printing, folio printing, screen printing, iris and ink application plan. Optically variable colors. Designing security elements for kinegram. Designing typography and portraits in lenticular technology for application on cards. Installation individualized raster element through PostScript in the portrait. Designing security line graphics and individual rosettes. Designing dynamic rosettes in lenticular 3D graphics. Security graphics on transparent polypropylene for packaging. Linearization of drawings from vector to pixel shape. Innovations in security graphics. Counterfeiting and anti-counterfeiting planning. Designing individualized documents and securities. Prerequisite for taking the course exam: class activity, online activity, exercise assignments, presentation.</p>		
Learning outcomes	<p>Knowledge about security graphic elements on documents and securities. Planning graphics on documents depending on the sequence of security technologies implemented. Design of nominal typography, microtext, typography in line graphics and planning of hidden text and information. Designing individualized security pixel postscript graphics. Design and implementation of security line graphics and individualized rosettes. Graphic planning for the UV and IR spectrum. Planning of security 3d graphics for lenticular technologies on documents and cards. Planning graphics for kinegrams. Knowledge of counterfeit protection systems. Design of individualized documents and securities.</p>		
Course content (syllabus)	<p>1. <i>Lecture</i>: Introduction to the overview of all security graphic elements on documents and securities. Analysis of the project task of creating graphics for documents and securities. <i>Exercise</i>: Setting the basic design concept of individualized document and security, the elements of which will be implemented in other exercises.</p>		

2. *Lecture:* Lecture on security graphic elements on banknotes, basic elements, portrait, comparison of security elements, trends in protection and graphic design of securities. Marks for the blind and partially sighted, watermark and portrait. *Exercise:* Planning of the first security elements and arrangement of elements. Portrait. Watermark planning, information design for the blind and visually impaired.
3. *Lecture:* Lecture on security graphic elements on personal documents and passports, protection standards and trends in the country and worldwide. *Exercise:* Designing security graphic elements for use on personal documents.
4. *Lecture:* Lecture on security graphic elements on securities, documents, diplomas, checks, vouchers and tickets. Possibilities of protection, individualization in smaller and larger editions. *Exercise:* Designing security graphic elements on documents, checks and tickets with individualized information.
5. *Lecture:* Lecture on security graphic elements on postage stamps, historical development of stamps, the possibilities of security graphics, double infrared elements, new technologies in the execution of postage stamps, planning the preparation of security elements on the sheet. *Exercise:* Designing security graphic elements on a personal postage stamp.
6. *Lecture:* Lecture on design elements of security nominal typography, microtext. Typography planning in line graphics. Planning hidden typography for the visual, ultraviolet and near infrared spectrum. Subordination of typography to the requirements of security printing: for letterpress, intaglio, intaglio and screen printing. *Exercise:* Nominal typography and microtext on securities, individualized design.
7. *Lecture:* Line and pixel graphics as information and anti-copying technology. Designing an individualized raster element. Planning of engraving and the transition of graphics in mutually different securities performance technologies. *Exercise:* Designing security line and pixel graphics.
8. *Lecture:* Linearization of drawing from vector to pixel state. Designing and installation individualized raster element through PostScript in the portrait. *Exercise:* Creating original rasterized proprietary PostScript graphics. Design and installation of an individualized raster element through PostScript in the portrait.
9. *Lecture:* Planning graphics on documents depending on the order of implementation technologies: design of metal and UV threads in paper, analysis of UV and infrared inks, design of security graphics for intaglio printing, folio printing, screen printing, iris and dye application plan. Optically variable colors. *Exercise:* Designing and planning the design of metal and UV threads in paper, prepress.
10. *Lecture:* Designing security line graphics and individualized rosettes in Postscript programming language. Designing dynamic rosettes in Postscript for performance in lenticular 3D graphics. Designing typography and portraits in lenticular for application on cards. Designing security elements for kinegram. *Exercise:* Independent design of security line graphics and individualized rosettes in lenticular 3D graphics. Projecting the change of typography and portrait in the lenticular. Designing 3D graphics for lenticular technologies.
11. *Lecture:* Security graphics on transparent polypropylene. Analysis of securities worldwide derived from polypropylene and trends in the use of polypropylene in security graphics in the future. *Exercise:* Planning of security graphics on transparent materials.

	<p>12. <i>Lecture:</i> Innovations in security graphics. New achievements. Dual graphics planning capabilities in ultraviolet (UV), visible (V) and near infrared spectrum (NIR). <i>Exercise:</i> Planning and drafting graphics for the UV spectrum, planning and drafting graphics for the IR spectrum.</p> <p>13. <i>Lecture:</i> A lecture on counterfeiting, and counterfeiting protection planning. <i>Exercise:</i> Scanning and recording of securities with a forensic camera, analysis of security graphic elements from recorded securities.</p> <p>14. <i>Lecture:</i> Lecture on designing a complete individualized document and security method preparation of the document with all security elements for implementation. <i>Exercise:</i> Merging all individualized elements during the exercises into a unique and protected graphic product (e.g. banknote, passport, ticket, value card). Designing individualized documents and securities.</p> <p>15. <i>Lecture:</i> Lecture on the possibilities of conventional and multimedia document presentation and securities. <i>Exercise:</i> Creation of a percentage of individualized documents and securities with legends and descriptions of protection in the UV, V and NIR spectral ranges.</p>

QUALITY CONTROL AND ASSURANCE IN GRAPHIC PRODUCTION			Code: 19509
Course teacher	DIANA MILČIĆ	Course status	optional
Original course title	Kontrola i osiguranje kvalitete grafičke proizvodnje	Semester (winter/summer)	winter
Teacher's contact email	diana.milcic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The aim of the course is to acquaint students with basic ISO norms and specifications in the field of graphics production and tools and methods for achieving compliance with standards. The goal is to train students that by choosing appropriate methods and tools, they manage processes in terms of achieving conformity norms.		
Learning outcomes	Determine the conformity of the system or process with the norms. Evaluate the effectiveness of a system or process by selection suitable methods and tools. Plan corrective actions for the purpose of improving the efficiency of the system or process. Choose appropriate methods and tools for carrying out corrective actions		
Course content (syllabus)	<ol style="list-style-type: none"> 1. ISO 12647 standard 2. ISO 2846 standard 3. ISO 15076 standard 4. Application of interpolation methods to reproduction processes. 5. Modeling of reproductive processes using the method of least square deviations. 6. Quality management system according to ISO 9000 7. Total quality management TQM 8. Application of TQM on graphic production process 9. Six sigma 10. Application of "six sigma" on graphic production process 11. "Leana" management 12. Application of "Leana" " on graphic production process 13. QFD - quality function development 14. FMEA – analysis of possible errors and consequences 15. Knowledge management 		
Required literature (available in the library and/or via other media)	Title

DESIGN AND ENVIRONMENT			Code: 19455
Course teacher	IVANA BOLANČA MIRKOVIĆ	Course status	compulsory
Original course title	Dizajn i okoliš	Semester (winter/summer)	summer
Teacher's contact email	ivana.bolanca.mirkovic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The main goal of the course is to train students to apply graphic design principles for environmental sustainability. Within the sustainability approach framework, industrial ecology and life cycle assessment settings are used primarily from "cradle to cradle". Students are explained the ecological principles of selecting and saving raw materials and materials, ways to save energy, and the best available printing techniques (BAT), then design for reuse, recycling, and develop a logical conclusion of the right path of choice. Students are introduced to quantitative methods and tools, and the further goal is the development of group work skills and the development of presentation skills.		
Learning outcomes	Students will be able to describe and apply design principles for environmental sustainability. Students will be able to explain the settings of industrial ecology. Students will be able to assess the life cycle of a graphic product "from cradle to cradle" and apply it when creating a graphic product. Students will be able to explain the carbon footprint and other ways of determining the impact of products, materials or processes on the quality of the environment and apply them in design. Students will be able to create a graphic product by choosing materials in accordance with environmental sustainability. Students will be able to choose the best available reproduction techniques when creating products. Students will be able to describe and evaluate the results of the application of eco indicators and apply them in solving the task. Students will be able to choose which design eco tools to use in the given examples. Students will be able to evaluate the advantages of reusing and/or recycling products.		
Course content (syllabus)	<ol style="list-style-type: none">1. <i>Lecture</i>: Introduction, the importance of product creation in the context of environmental quality, generally about the concepts of environmental protection related to design <i>Seminar</i>: Introduction, individual assignments2. <i>Lecture</i>: Sustainable development, environmental sustainability and design. <i>Seminar</i>: Design and concept of ecological sustainability, examples of good practice.3. <i>Lecture</i>: Design for the environment. Design for X. <i>Seminar</i>: Design and optimization of ecological characteristics of products including phases of production.4. <i>Lecture</i>: Design and ecological efficiency. <i>Seminar</i>: Production and service strategy aimed at increased economic profit.5. <i>Lecture</i>: Industrial ecology. Historical development. Key settings <i>Seminar</i>: Design for production with sustainable use of resources and energy.6. <i>Lecture</i>: Industrial metabolism. <i>Seminar</i>: Flows of materials and energy in industrial production systems viewed from a biological point of view.		

	<p>7. <i>Lectures</i>: Industrial symbiosis. <i>Seminars</i>: Examples of good practice: examples of symbiosis in the graphic industry.</p> <p>8. <i>Lecture</i>: Knowledge verification through a colloquium. <i>Seminar</i>: Design and pollution prevention.</p> <p>9. <i>Lecture</i>: Product life cycle assessment. ISO standards. <i>Seminars</i>: Case studies: life cycle assessment for book and e-book.</p> <p>10. <i>Lecture</i>: Assessment of the life cycle of a graphic product. Phases of analysis. Seminar: Evaluation of the impact of the graphic product according to the impact factors. Design and database.</p> <p>11. <i>Lecture</i>: Analysis and comparison of environmental load. Methods: EI, EDIP, CML and others. <i>Seminars</i>: Calculation methodology: EI, EDIP. Examples from practice in the domain of materials and printing.</p> <p>12. <i>Lecture</i>: Tools of eco-friendly design: Tools that include the product life cycle at all stages. <i>Seminars</i>: Examples of the use of ecological design tools that include the life cycle</p> <p>13. <i>Lecture</i>: Environmentally friendly design tools that have a qualitative approach. <i>Seminars</i>: Examples of using ecological tools for design with a qualitative approach.</p> <p>14. <i>Lecture</i>: Tools for environmentally friendly design with a quantitative approach. <i>Seminars</i>: Examples of the use of tools for ecologically acceptable design with a quantitative approach.</p> <p>Knowledge verification through a colloquium.</p>

DIGITAL MULTIMEDIA 2			Code: 19499
Course teacher	TAJANA KOREN IVANČEVIĆ NIKOLINA STANIĆ LOKNAR	Course status	compulsory
Original course title	Digitalni multimedij 2	Semester (winter/summer)	summer
Teacher's contact email	tajana.koren.ivancevic@grf.unizg.hr nikolina.stanic.loknar@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	Acquisition of basic knowledge in the field of video recording, processing and post-production, including animation for the creation of the opening and closing credits. In the course, students will learn how to use a video camera and by recording raw material in the studio and outdoors. Getting to know different video formats and video recording devices. It will be explained how to format the input of video material to the computer. The methods of video processing and editing will be explained. Inserting text and audio files into the video. Ways of removing the background in the recorded video material and adding the desired background, either static or mobile. Video tapes are designed in the same way. The final product of the subject is completely a self-made video work with its own background, subtitles and added sound.		
Learning outcomes	Students will be able to describe the process of making a video. Students will plan the video making process. They will be able to choose quality shots of recorded material. Students will be able to design the opening and closing credits video work. Students will be able to add transitions and effects in video creation. Students will make animations and incorporate them into the video work. Students will create new ideas and solutions in making video work. Students will act in teamwork.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Getting to know the basic concepts of video. Selection of teams and topics of the final thesis. 2. Digital video standards. Video capturing and basics of video processing. 3. Color video models. Frame size, frame and pixel ratios. Pixel shapes. 4. Concept of time. Number of frames per second. Manipulation of frames in video processing. 5. Video size and formats, distortion. Exercises - colloquium 6. Record types of video files. Exporting video files. 7. File sizes, target audience and medium, subsequent editing. 8. Optimization of video files, calculation of video file size with added audio track. 9. Video compression and decompression, impact on image quality. 10. Transitions when connecting different frames Exercises – colloquium. 11. Introduction of text and audio files into the video. 12. Post-production. 		

	13. Designing and adding additional effects. 14. Exporting the final product with regard to the target audience and medium. 15. Presentation of the final product created by teamwork. Exercises - colloquium

CTP TECHNOLOGY			Code: 19481
Course teacher	SANJA MAHOVIĆ POLJAČEK	Course status	optional
Original course title	CTP tehnologija	Semester (winter/summer)	summer
Teacher's contact email	sanja.mahovic.poljacek@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+1
COURSE DESCRIPTION			
Course objectives	Definition of CtP processes and digital workflow in the production of printing plates. Definition of the elements of the Computer to Plate (CtP) system for creating an image on the surface of printing plates. Analysis of devices for imaging printing plates and classification according to architecture, radiation sources and printing techniques. Definition and comparison of different systems for the production of printing plates depending on the technical solutions of the printing units and the structure of the printing plates. Differentiation and evaluation of the technologies available on the market and the possibility of their application in the different workflows.		
Learning outcomes	Students will have the knowledge and ability to define the digital workflow in graphic arts prepress, classify and explain various CtP processes; plan the workflow of processes in graphic arts technology. After completing the course, students will be able to define the CtP system for imaging plates, classify and compare devices for imaging plates, compare and analyze different types of CtP plates, calculate the parameters of imaging plates for different printing techniques, apply different tools for creating imposition templates and optimizing the printing process, calculate and select the type of printing plate taking into account the process parameters, analyze and evaluate the development of CtP technologies, work in a team, apply foreign language skills in literature research.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Computer to ... technologies (0.25 ECTS) 2. CtP - Computer to Plate (0.25 ECTS) 3. Optimization of digital information for imaging process (0.25 ECTS) 4. Imaging devices - architecture, radiation sources (0.25 ECTS) 5. Adjustable imaging devices (0.25 ECTS) 6. CtP printing plates for intaglio printing (0.25 ECTS) 7. CtP printing plates for intaglio printing - electro gravure (0.25 ECTS) 8. CtP printing plates for flexographic printing (0.25 ECTS) 9. CtP printing plates for flexographic printing (0.25 ECTS) 10. CtP printing plates for offset printing (0.25 ECTS) 11. CtP printing plates for offset printing (0.25 ECTS) 12. CtP printing plates for screen printing (0.25 ECTS) 		

	13. CtP printing plates for pad printing (0.25 ECTS) 14. Trends in CtP, non-process printing plates (0.25 ECTS) 15. Trends in CtP, non-process printing plates (0.25 ECTS)

OPTOELECTRONIC SYSTEMS 2			Code: 19502
Course teacher	LIDIJA MANDIĆ	Course status	optional
Original course title	Optoelektronički sustavi 2	Semester (winter/summer)	summer
Teacher's contact email	lidija.mandic@grf.unizg.hr	ECTS credits	6
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+2
COURSE DESCRIPTION			
Course objectives	Learn about new technologies, know the principle of operation and application, distinguish between technologies and recognize their application.		
Learning outcomes	Explain the principle of device operation, evaluate devices of the same type according to characteristics, choose devices according to the purpose, to independently research with the aim of lifelong learning.		
Course content (syllabus)	<ol style="list-style-type: none">1. Various LED technologies2. New screen technologies3. Principle of 3D monitor operation4. Touch screens5. Touch screen technologies6. Touch screen technologies7. Wireless technologies8. Working principle of RFID9. Application of RFID10. NFC and application11. Motion sensors12. Comparison of different motion sensors13. Printed electronics14. Printed electronics15. New technologies		
Required literature (available in the library and/or via other media)	Title

SYSTEM FOR THE ENVIRONMENT MANAGEMENT			Code: 19461
Course teacher	MARINA VUKOJE IVANA BOLANČA MIRKOVIĆ	Course status	optional
Original course title	Sustav upravljanja okolišem	Semester (winter/summer)	summer
Teacher's contact email	marina.vukoje@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	The aim of the course is to train students to participate in the implementation of the environmental management system in the company. Students get to know the reasons for environmental protection and the advantages that they achieve by introducing ecologically sustainable production management. The goal is to acquaint students through the contents of the course with how to achieve competitive advantages through environmental protection. A further goal is to train students to carry out environmental management through life cycle assessment "from cradle to cradle", eco-balancing and ecological labeling. One of the goals of the course is to train students to participate in solving the specifics of environmental management for small businesses.		
Learning outcomes	Students will be able to evaluate the advantages achieved by introducing ecologically sustainable production management. Students will be able to participate in planning the modernization of the company based on the principles of sustainability. Students will be able to apply environmental management as a fundamental factor of a successful company. Students will be able to participate in the application of the environmental management system. Students will be able to recognize and evaluate the impact on the environment in the area of emissions of pollutants, process and waste water, consumption of materials and energy for a specific production process. Students will be able to evaluate the eco-balance in order to optimize the ecological suitability of production and products.		
Course content (syllabus)	<ol style="list-style-type: none">1. Defining basic concepts in environmental protection.2. Reasons for preserving the environment in production. Connection between production and the environment.3. Principles of sustainable development. Socio-economic foundations of ecological sustainability.4. Monitoring environmental changes and selecting ecological sustainability policy.5. Important determinants of ecological management. Seven rules of the 7Rs management system.6. Relationship between development, environmental protection, and economic growth.7. Environmental management system: scope, definitions, system requirements.8. Knowledge check through colloquium.9. Environmental management system model, planning, implementation, and operation.10. Description of the production process - environmental protection and technological process.		

	<p>11. Environmental management through the product life cycle, definitions, division, assessment methodology, functional unit, system boundary. Generic elements of life cycle assessment.</p> <p>12. Environmental management through eco-balancing.</p> <p>13. Environmental management through ecological labeling.</p> <p>14. Ecological settings for small entrepreneurship and specificities of environmental management.</p> <p>15. Knowledge check through colloquium.</p>

OPTICAL METHODS OF THE PRINTING SURFACE INVESTIGATIONS			Code: 19490
Course teacher	KATARINA ITRIC IVANDA	Course status	optional
Original course title	Optičke metode ispitivanja tiskovnih površina	Semester (winter/summer)	summer
Teacher's contact email	katarina.itric.ivanda@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The course provides students with knowledge of methods for examining the optical properties of various types of printing surfaces, both unprinted and printed. It enables them to plan research methodologies and use measuring devices to demonstrate formulated hypotheses. In laboratory exercises, students apply the knowledge acquired through the curriculum, which is continuously connected to the foundational courses throughout all forms of instruction.		
Learning outcomes	<p>Describe the correlation between mutually dependent physical quantities and apply them to real situations in graphic reproduction. Use computer programs for statistical processing and graphical presentation of data.</p> <p>Observe, record, and analyze data obtained from laboratory tests.</p> <p>Create measurement conditions to assess the stability of printing surfaces.</p> <p>Utilize relevant standards for assessing the quality of printing surfaces based on their optical characteristics.</p> <p>Interpret the reflection spectra of printing surfaces and colorants.</p> <p>Apply the Kubelka-Munk model to calculate the absorption and scattering coefficients on measured printing surfaces, whether recycled or non-recycled.</p> <p>Describe spectrophotometers and recognize when/how to use them in graphic reproduction.</p> <p>Analyze the interaction of light and printing substrate based on physical models, understanding the optical/physical enlargement of the raster element.</p> <p>Explain the interaction of light with the printed substrate using simple physical models (Murray-Daveis and Yule-Nielsen).</p> <p>Define accelerated aging (degradation of the printing surface under controlled conditions) and natural aging.</p>		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Introduction. Electromagnetic radiation, spectrum. Energy of radiation. Radiation sources. Impact of electromagnetic radiation on the environment. Visible radiation. Perception of visible radiation. Thermal radiation. Ultraviolet radiation. Microwaves. Radio waves. X-ray radiation. Gamma radiation and cosmic rays. 2. Emission and absorption spectra. Characteristics of spectra. Spectra of gases, liquids, and solids. Operation principle of spectrometers. Types of spectrometers; prism and optical grating. Standard light sources. 3. Reflection of electromagnetic radiation on a completely opaque surface; surface, mirror, reflection. Printing substrates and surface reflection. Layered and unlayered surfaces. Reflectance curves in the visible spectrum and the structure of the printing surface. 		

	<ol style="list-style-type: none"> 4. Light scattering within bound particles; turbid media, cloudy systems. Kubelka-Munk scattering theory and its application in investigating the optical properties of printing surfaces. Reflectance, scattering, and absorption spectra. Relationship between scattering and structure, types, substrates. 5. Murray–Davies and Yule-Nielsen improved scattering theory. 6. Scattering on non-recycled and recycled substrates. Analysis of particle impurities in printing substrates. 7. Scattering and colored substrates, papers. Reflectance curves and factors of scattering and absorption. Limitations of applying the Kubelka–Munk scattering theory to recycled and fully colored substrates. 8. Scattering and types of printing substrates (transparent/opaque). 9. Scattering and related optical properties of printing surfaces. Brightness, transparency, opacity. Familiarization with optical measurement standards; ISO, TAPPI. 10. Fluorescence; explanation of the phenomenon. Detection of the phenomenon in reflectance measurements. Fluorescent materials. 11. Aging and stability of printing surfaces. Visible and UV radiation. Selection of specific radiation sources and measurement of radiation energy. 12. Stability of printing surfaces and the influence of moisture and temperature. Effect of substrate acidity on stability. Accelerated and natural aging. 13. Physical changes within the substrate caused by aging. 14. Overview of selected testing methods. Analysis of all student results in the group. 15. Familiarization with literature data on proposed methods and suggestions for new content for testing printing surfaces.

SURFACE PHENOMENA ON PRINTING FORMS			Code: 19480
Course teacher	TOMISLAV CIGULA TAMARA TOMAŠEGOVIĆ	Course status	optional
Original course title	Površinske pojave na tiskovnim formama	Semester (winter/summer)	summer
Teacher's contact email	tomislav.cigula@grf.unizg.hr tamara.tomasegovic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+1+0
COURSE DESCRIPTION			
Course objectives	To define and analyse surface phenomena which are specific for printing forms. To choose measurement methods which enable characterization of materials and processes in printing forms production. To evaluate influence of the processing parameters. To optimize printing forms production. To determine composition of fluids in the printing processes for the highest functionality.		
Learning outcomes	Proposing new and functional solutions for graphic products having in mind used materials and production processes of printing forms; evaluation and characterization of advanced imaging processes in graphic industry; implementation of the eco-system in graphic processes; optimization of processing steps in graphic reproduction. After finishing the course, the student can: define and classify surface phenomena in the graphic industry; analyse and evaluate the influence of the material and its surface treatment on functionality in graphic reproduction processes; explain and evaluate physicochemical properties of fluids and the parameters that affects them; choose and apply measurement methods in surface properties analysis, evaluate the material processing and propose optimization solutions, propose additives ratio in liquids to increase functionality; evaluate and elaborate modification of material processing; literature search related to materials for the production of printing forms.		
Course content (syllabus)	<ol style="list-style-type: none">1. Definition of surfaces, surface phenomena on printing forms2. Adsorption in graphic reproduction processes3. Wetting in graphic reproduction processes4. Methods of determining the wetting degree on the surfaces of the printing form5. Capillarity in graphic reproduction processes6. Mechanical properties of surfaces, structure related topography of solids7. Surface roughness, roughness parameters8. Methods for determining roughness parameters9. Processes of printing forms production that affect the change in the roughness of the material10. Physico-chemical properties of liquids in the graphic industry11. The role and composition of the wetting solution12. Surfactants		

	13. Methods for determining the surface properties of liquids 14. Methods for determining the free surface energy of materials 15. Parameters affecting solid-liquid interaction

INK IN DIGITAL ENVIRONMENT			Code: 96536
Course teacher	LIDIJA MANDIĆ	Course status	optional
Original course title	Boja u digitalnom okruženju	Semester (winter/summer)	summer
Teacher's contact email	lidija.mandic@grf.unizg.hr	ECTS credits	3
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+0
COURSE DESCRIPTION			
Course objectives	Classification of parameters affecting color appearance. Explain the importance of modeling the chromatic model adaptations. Connect chromatic adaptation models with color appearance models. Explain models for image appearance.		
Learning outcomes	Evaluation of the characteristics of prepress, printing, finishing and multimedia devices Expected learning outcomes at the subject level explain the parameters that affect the appearance of colors compare the different ones chromatic adaptation models connect models for color appearance with application differentiate models for colors appearance from the image appearance model.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Experience of color and parameters that influence the experience of color. 2. Color characteristics that are included in the color appearance model. 3. Human visual system and adaptation. 4. Parameters affecting color appearance. 5. Parameters affecting color appearance. 6. Color spaces. 7. Device characterization. 8. Device characterization. 9. Models of chromatic adaptation. 10. Models of chromatic adaptation. 11. Models of chromatic adaptation. 12. Color appearance model. 13. Color appearance model. 14. Model for image appearance. 15. Image appearance model.

GRAPHIC DESIGN 4			Code: 33073
Course teacher	MAJA BROZOVIĆ	Course status	compulsory
Original course title	Grafički dizajn 4	Semester (winter/summer)	summer
Teacher's contact email	maja.brozovic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	1+0+3
COURSE DESCRIPTION			
Course objectives	To obtain the knowledge and acquire the know-how in presenting design concept for a visual identity and its application in form of a book of graphic standards. Course focuses on finding and realizing design concepts for visual identity of a company (or a product) through trademark/logotype design, elaboration of all aspects of visual identity and presentation of its intended applications in form of a book of graphic standards. Through lectures and practical work on project assignments, students obtain knowledge and practical skills needed to present design concepts for visual identity, in accordance to the requirements of public competitions. Theme units of the course encompass examples of client's requirements, analysis of the affinity of different job-types/companies, selecting the best solutions, development of design concepts or models, delivering proposals for trademark/logotype design, its presentation and assessment, as well as implementation of the final draft. Student research activities on the project assignment consist in elaborating all aspects of visual identity and materializing it in the form of a book of graphic standards. These include the following: description of the objectives, SWOT analysis in regard to competition, construction of a trademark, appropriate typographic customization and colour pallet definition, listing of authorized and prohibited implementations, creating previews of application on corporate communication, promotional materials and other aspects of its intended use.		
Learning outcomes	<p>Analysis and critical assessment of marks functioning as visual identity. Evaluate existing, competitive and own author's logo solutions. Designing various concepts for trademark/logotype while respecting the specific needs of the client. Presentation of proposed design concepts for trademark/logotype according to the given framework. Conducting a development project aimed at shaping visual identity. Producing a book of graphic standards according to the client's requests. Autonomous completion of project assignments in simulated conditions of public competition.</p>		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Visual identity - definition, purpose, goals, examples Analyze graphic solutions of existing signs and company's logos of various activities 2. A set of guidelines for creating a visual identity Compilation of guidelines for designing the company's visual identity according to the student's choice 		

	<ol style="list-style-type: none"> 3. Examples of visual identities of related activities, analysis of signs and logos Analyze the visual identities of competing companies in relation to the selected company for which the student drew up guidelines in the previous exercise 4. Examples of different proposals for sign and logo solutions Design five proposals for a conceptual design of a sign, logo, or its combination in relation to the set of guidelines for creating a visual identity 5. Successfulness evaluation of selected solutions in real circumstances of the sign Select the best solution from the five proposed solutions within a group of students 6. Construction of signs, logos, slogans in the coordinate system, determination of empty space Construct the sign, logo, and slogan of the chosen solution in the coordinate system, define the empty space 7. Sign/logo application in different sizes, determination of the minimum allowed size, correction needs in small sizes Determine the minimum size of the sign/logo, correct the conceptual solution due to the possible loss of certain parts 8. Defining the basic and extended color palette, applying systems Define the number and types of colors of the sign/logo through different applying systems 9. Defining official typography: primary and secondary Analyze examples, select primary and secondary typography, selection justification 10. Obligatory performance forms of the sign/logo and their application Perform the sign/logo in the following forms: monochrome, negative, grayscale, line version 11. Permitted and forbidden application forms of the sign/logo Recommend other permitted forms of sign/logo and define forbidden applications 12. Sign/logo application on different substrates (monochrome, multicolor, photos) Anticipate the need to apply the sign/logo on different substrates and define the appearance of the sign/logo on grayscale, monochrome, and multi-colored substrates, photographs 13. Examples of business documentation, advantages, and disadvantages Design business documentation that reflects the recognizability of the subject's visual identity 14. Examples and purpose of sign/logo application for the purpose of promotional activities Apply the sign/logo on small promotional materials and signage 15. Examples analysis of different books of standards Organize visual identity items in the form of a book of standards

WRAPPING			Code: 96534
Course teacher	DIANA MILČIĆ	Course status	optional
Original course title	Pakiranje	Semester (winter/summer)	summer
Teacher's contact email	diana.milcic@grf.unizg.hr	ECTS credits	5
Study programme (undergraduate BSc, graduate MSc)	MSc	Hours of teaching (L+S+E)	2+0+1
COURSE DESCRIPTION			
Course objectives	The aim of the course is to acquire basic and professional knowledge in the field of packaging and to train students for selection suitable packaging equipment depending on the product and form of packaging.		
Learning outcomes	Describe the components of the packaging value chain and demonstrate how these influences the design of packages component. Design the variants of packaging for different levels of packing and recommend the most suitable. Select suitable materials and technology for the manufacturing of a particular type of packaging. Recommend the packing machines and equipment.		
Course content (syllabus)	<ol style="list-style-type: none"> 1. Classification of packaging and packaging machines. 2. Supply of packaging lines. 3. Lines for packaging in flexible packaging. 4. Lines for packing liquid substances. 5. Lines for packing bulk substances. 6. Closing the packaging. 7. Lines for filling cardboard packaging. 8. Quality control systems on packaging lines. 9. Containers and transport systems on packaging lines. 10. Drive and control parts of packaging lines. 11. Final packaging operations: wrapping and palletizing. 12. Packaging system design: necessary equipment. 13. Computer support for packaging system design. 14. Designing the packaging system: term and financial plans. 15. Integration of treated thematic units.
